1 INTRODUCTION

This report presents the results of the traffic impact analysis (TIA) for the proposed The Preserve at San Juan development (“Project”) located west of Ortega Highway (SR-74) on the north and south sides of Long Canyon Road, which is currently named Forest Route 6S05 in the County of Orange.

1.1 STUDY OBJECTIVES

The purpose of this traffic impact analysis is to evaluate The Preserve at San Juan from a traffic circulation standpoint. Study objectives include: (1) documentation of existing traffic conditions in the vicinity of the site without and with the project; (2) evaluation of Near-Term (2017) Conditions and Long-Range (2035) Conditions without and with the project; (3) and determination of on-site and off-site improvements needed to achieve County of Orange and adjacent jurisdiction level of service requirements. This TIA has been prepared in accordance with the *City of Menifee Planning Department Traffic Impact Analysis Guidelines* (August 2015).

1.2 SITE LOCATION

The project site consists of two parcels located west of Ortega Highway (SR-74) on the north and south sides of Long Canyon Road, which is currently named Forest Route 6S05. The project site is located within unincorporated Orange County. Exhibit 1-1 illustrates the project site location.

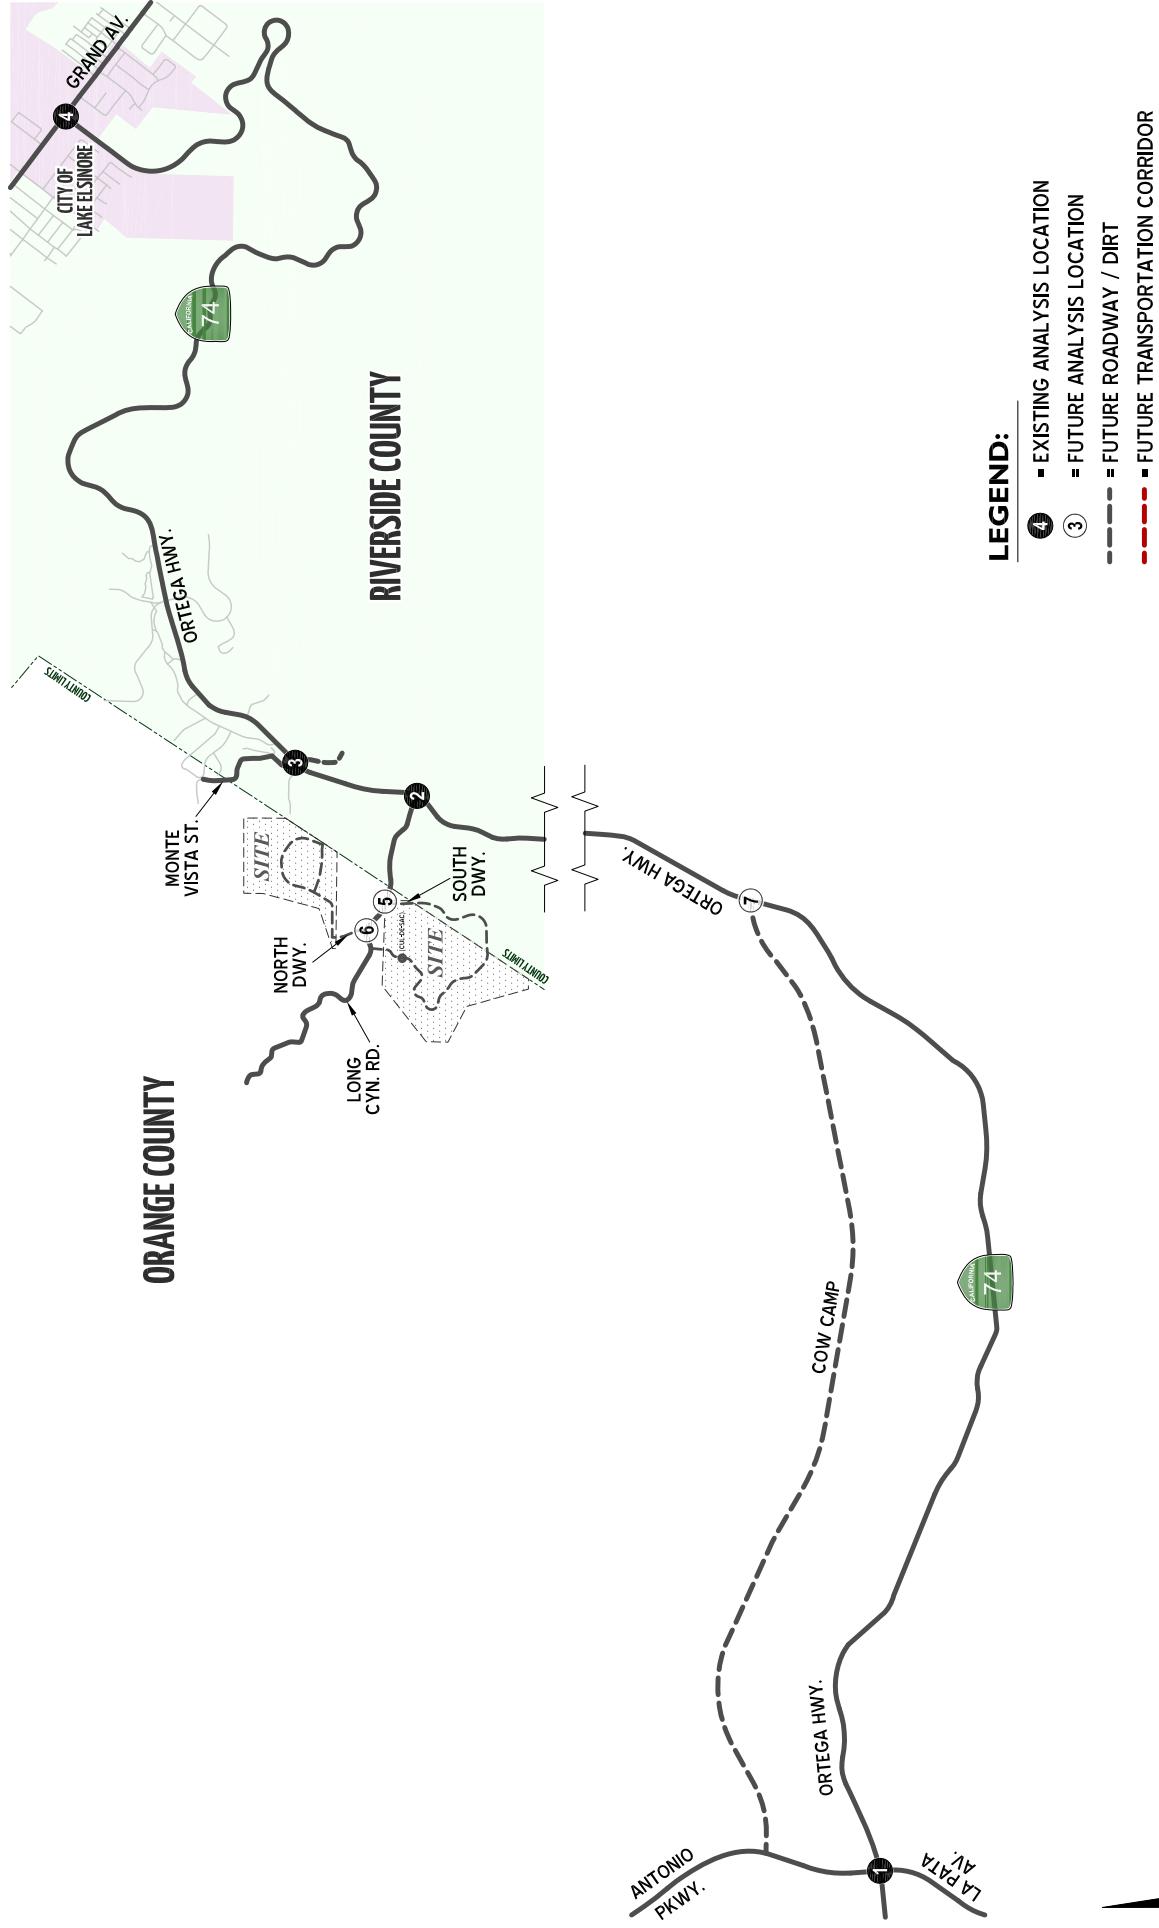

1.3 STUDY AREA

Exhibit 1-1 illustrates the project study area. Based on discussions with County staff, the study area includes the following seven (7) existing and future intersections within the noted jurisdictions:

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 1 | Antonio Pkwy. - La Pata Av. (NS) / Ortega Hwy. (SR-74) (EW) | Unincorporated County of Orange |
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 4 | Ortega Hwy. (SR-74) (NS) / Grand Av. (EW) | City of Lake Elsinore |
| 5 | South Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 6 | North Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 7 | Ortega Hwy. (SR-74) (NS) / Cow Camp (EW) – Future | Unincorporated County of Orange |

EXHIBIT 1-1 LOCATION MAP

1.4 PROJECT DEVELOPMENT DESCRIPTION

1.4.1 PROJECT INTENSITY

- North Parcel: 29 single-family detached residential dwelling units
- South Parcel: 43 single-family detached residential dwelling units

In addition, the proposed project includes development of 25 to 50 acres of vineyards. Production and/or wine making facilities are not included in the proposed project. It is estimated that five (5) employees would be needed on a year-round basis (daily) to oversee the vineyard production, with peaks of up to twenty-five (25) employees needed during harvest season.

Therefore, a total of 72 single-family detached residential dwelling units and a vineyard land use with 5 employees are included in the analysis (See Exhibit 1-2).

1.4.2 EXISTING LAND USE

The project site is vacant and does not generate significant traffic. Adjacent land uses include the following:

- North – Vacant
- South – Vacant
- East – Vacant
- West – Vacant

1.4.3 SITE PLAN

Exhibit 1-2 illustrates the conceptual site plan.

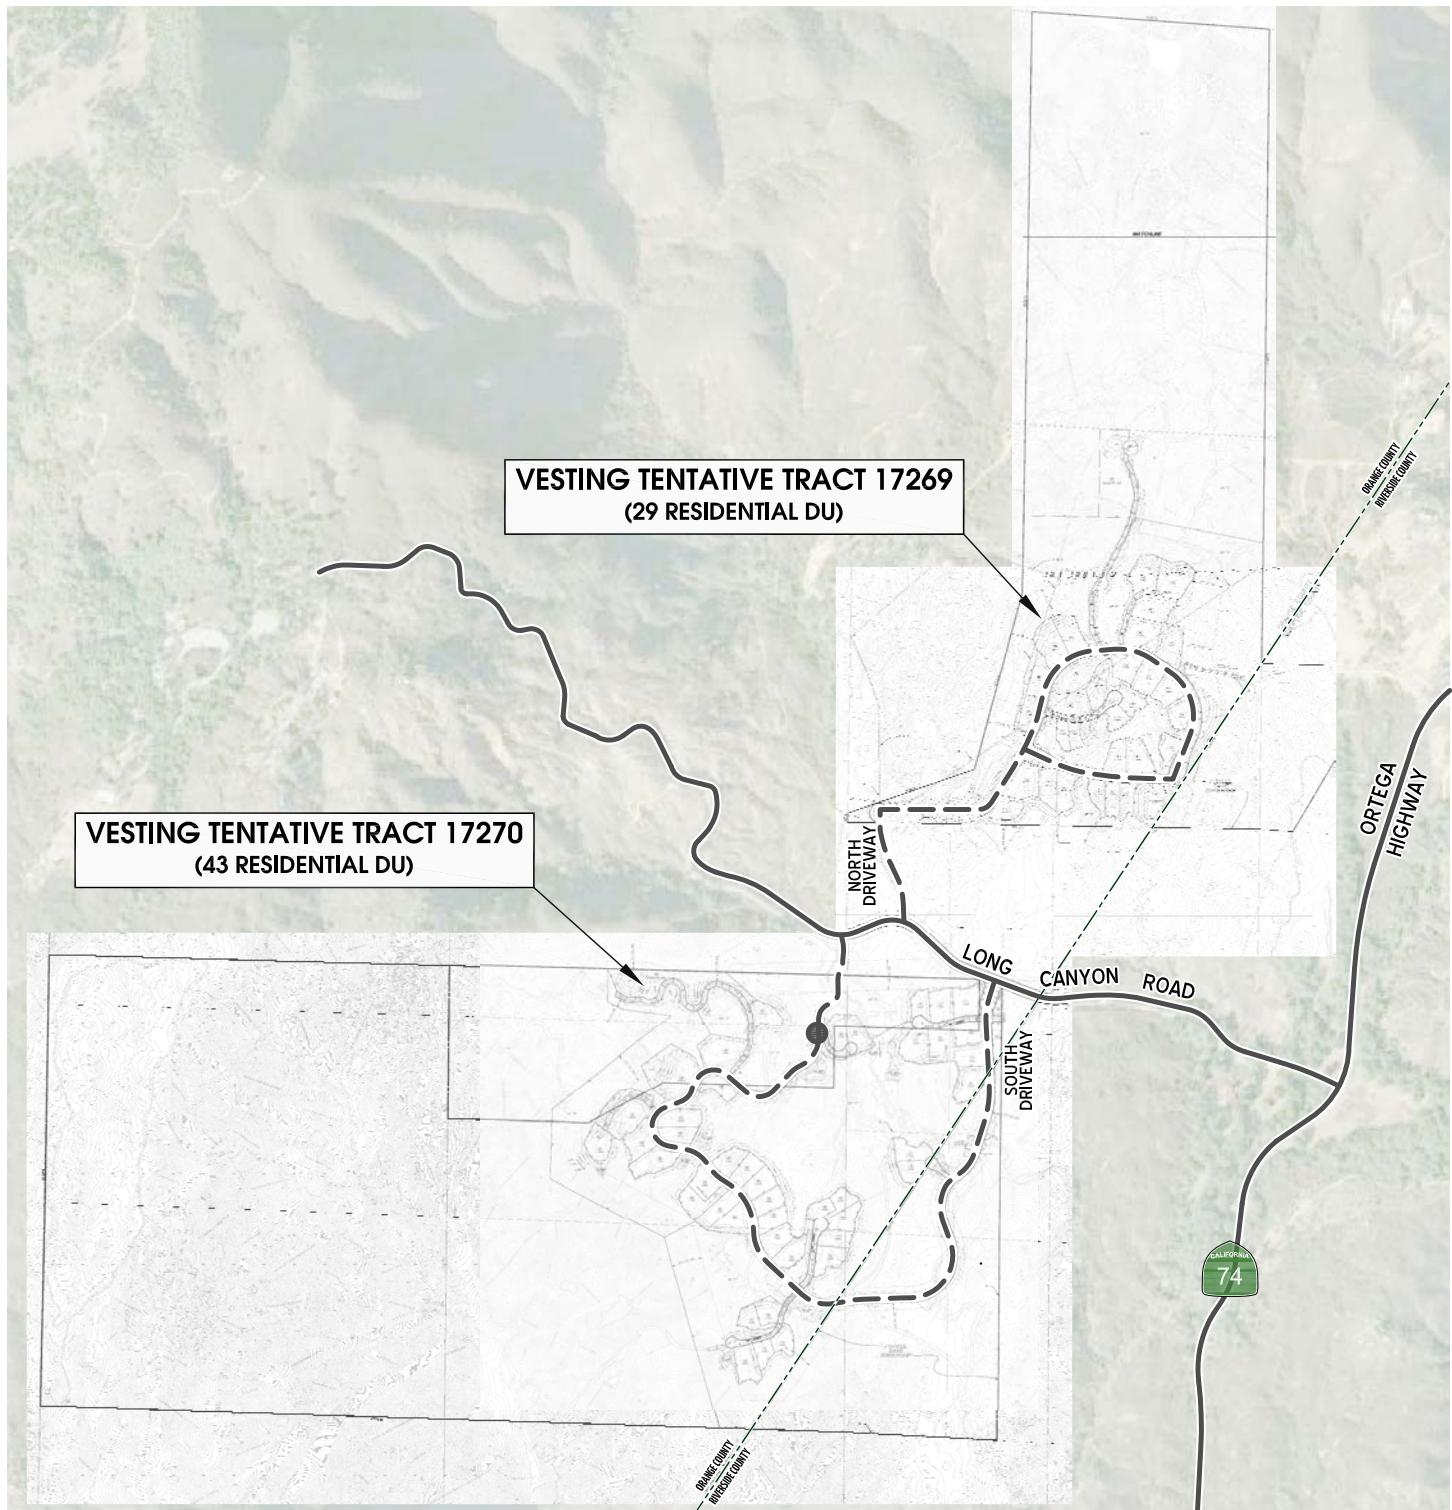

1.4.4 PHASING AND TIMING

For the purposes of this analysis, the project "Opening Year" is identified as 2020.

1.4.5 PROJECT VEHICULAR ACCESS

The proposed project, The Preserve at San Juan, will have access to Ortega Highway (SR-74) via Long Canyon Road. The North Parcel and the South Parcel will each have an access road, connecting to Long Canyon Road. Prior to the recordation of a subdivision map, the subdivider intends to request deviation to OCPW Std Plan 1109 to allow Long Canyon Rd from "A" Street to Ortega Hwy to be maintained with curb to curb width of 26' instead of the typically required 40', in a manner meeting the approval of the Manager, Traffic Engineering. Essentially, approval of this deviation would allow the existing pavement to remain, rather than requiring widening of the existing Long Canyon Road. Additional pavement for roadway widening along this segment is not necessary to provide adequate level of service. The benefits of maintaining the existing roadway width include the avoidance of increases in the impermeable surface area and less disruption of existing hydrology. It is also noteworthy that the project does not require on-street parking on this low volume access road.

EXHIBIT 1-2
SITE PLAN

2 AREA CONDITIONS

2.1 STUDY AREA

The study area includes the following seven (7) existing and future intersections as shown on previous Exhibit 1-1:

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 1 | Antonio Pkwy. - La Pata Av. (NS) / Ortega Hwy. (SR-74) (EW) | Unincorporated County of Orange |
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 4 | Ortega Hwy. (SR-74) (NS) / Grand Av. (EW) | City of Lake Elsinore |
| 5 | South Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 6 | North Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 7 | Ortega Hwy. (SR-74) (NS) / Cow Camp (EW) – Future | Unincorporated County of Orange |

2.2 EXISTING TRAFFIC CONTROL AND INTERSECTION GEOMETRICS

Exhibit 2-1 identifies the existing roadway conditions for the study area roadways. The number of traffic lanes for the existing roadways and the existing intersection controls are also identified. Ortega Highway (SR-74) is a two-lane undivided highway. The intersection of Ortega Highway and Long Canyon Road (currently named Forest Route 6S05) is stop-controlled on the eastbound (cross street) approach.

2.3 EXISTING TRAFFIC VOLUMES

Existing traffic volume data was collected in February, 2017. Existing (2017) AM and PM peak hour intersection volumes are shown on Exhibits 2-2 and 2-3, respectively. Traffic count data sheets are included in Appendix 2.1 of this report.

Exhibit 2-4 shows the existing ADT volumes. The ADT volumes are either based on traffic counts or have been estimated by factoring up peak hour counts. The following formula was used to estimate the daily volume for each intersection leg if daily traffic counts were not available:

$$\frac{(AM \text{ Peak Hour (Link Volume)} + PM \text{ Peak Hour (Link Volume)})}{AM \text{ Link Volume \% of Daily Volume} + PM \text{ Link Volume \% of Daily Volume}}$$

The daily traffic volume count worksheets and peak hour to daily traffic calculations are included in this report as Appendix 2.1. The resulting (combined AM and PM) ADT calculation factor is 5.263.

EXISTING (2017)
AVERAGE DAILY TRAFFIC (ADT)

2.4 EXISTING (2017) CONDITIONS TRAFFIC SIGNAL WARRANTS ANALYSIS

A detailed description of the traffic signal warrant analysis methodologies is presented in subsequent Section 4.4. Based on the existing (2017) Conditions, none of the unsignalized intersections are expected to meet traffic signal warrants. The traffic signal warrant analysis worksheets for Existing (2017) Conditions are included in Appendix 2.2 of this report.

2.5 EXISTING (2017) CONDITIONS INTERSECTION OPERATIONS ANALYSIS

Existing (2017) peak hour traffic operations have been evaluated for the study area intersections. A detailed description of the methodologies for the intersection operations analysis is included in subsequent Section 4.4 of this report. For this study, the technical guide used in the evaluation of traffic operations is the 2010 Highway Capacity Manual (HCM) for all study area intersections. In addition, the Intersection Capacity Utilization (ICU) methodology is also used in the evaluation of signalized intersections within the county of Orange.

The results of an intersection operations analysis are expressed in terms of “Level of Service” (LOS), ranging from LOS “A”, which is free flowing traffic, to LOS “F”, which is stop-and-go traffic. The LOS criteria policies for the various jurisdictions, which the study area intersections are located within, are discussed in subsequent Section 4.2 of this report.

The results of this Existing (2017) analysis are summarized in Table 2-1, based on the existing intersection geometrics and traffic control devices at each analysis location. For Existing (2017) traffic conditions, the study area intersections are currently operating at acceptable levels of service during the peak hours.

Existing (2017) Conditions intersection operations analysis worksheets are included in Appendix 2.3 of this report.

2.6 JURISDICTION PLANS

Exhibit 2-5 shows the County of Orange Master Plan of Arterial Highways, and Exhibit 2-6 illustrates the County of Orange General Plan arterial street cross-sections.

Exhibit 2-7 shows the County of Riverside General Plan Circulation Element, and Exhibit 2-8 illustrates the County of Riverside General Plan arterial street cross-sections.

Exhibit 2-9 shows the City of Lake Elsinore General Plan Circulation Element, and Exhibit 2-10 illustrates the City of Lake Elsinore General Plan arterial street cross-sections.

TABLE 2-1
EXISTING (2017) CONDITIONS
INTERSECTION OPERATIONS ANALYSIS SUMMARY

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing

² Volume/Capacity Ratio and Level of Service calculated using the TRAFFIX operation analysis software, Traffix Version 8.0 R1 (2008), based on the Intersection Capacity Utilization (ICU) method.

³ Delay (in seconds) and Level of Service calculated using Synchro 9 analysis software based on the 2010 Highway Capacity Manual (HCM) method.

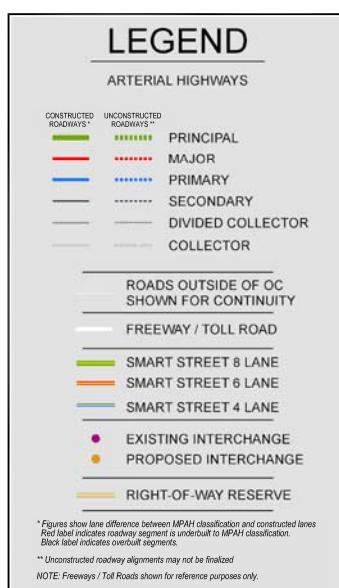

⁴ LOS = Level of Service based on HCM methodology.

⁵ TS = Traffic Signal; CSS = Cross Street Stop

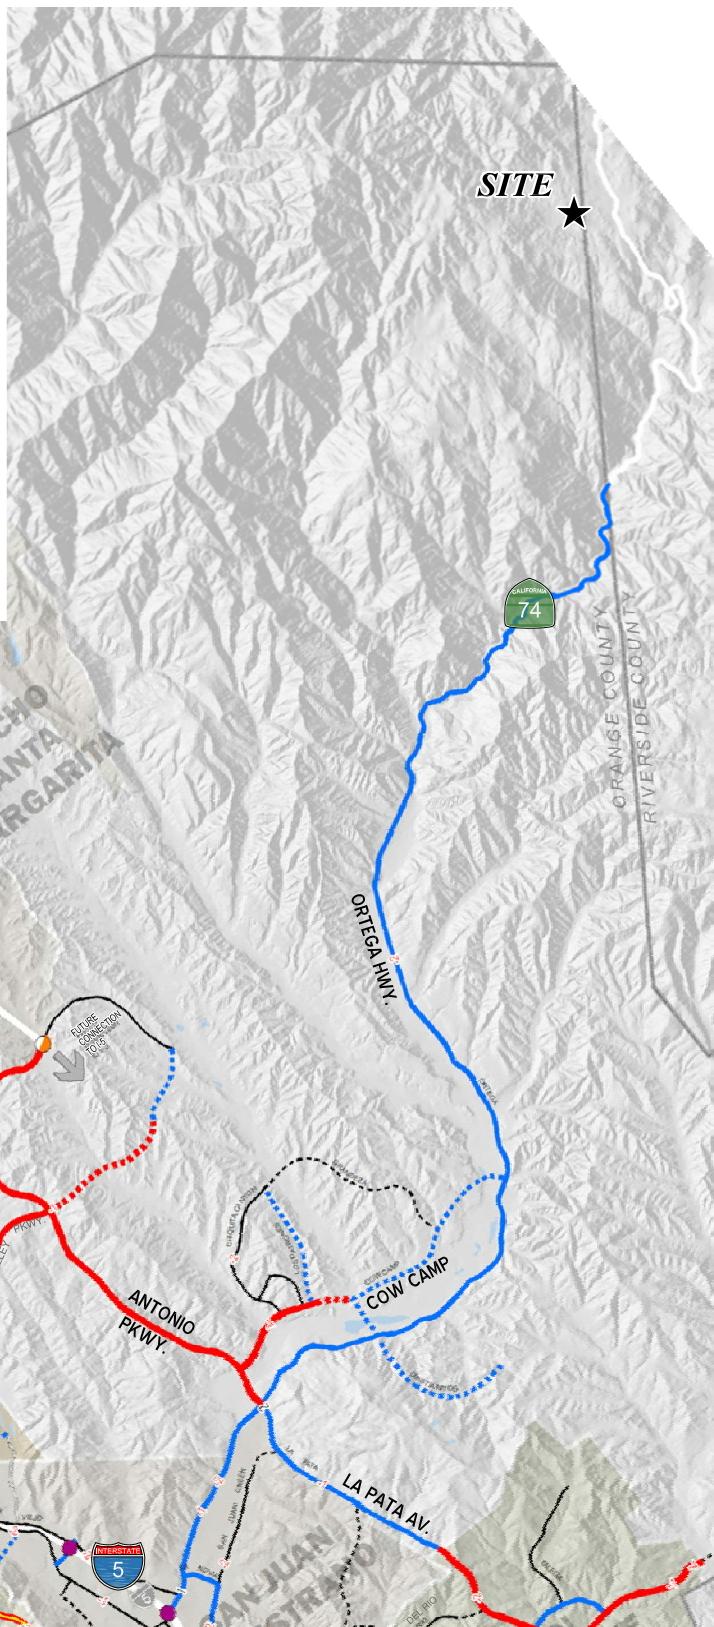

⁶ No "Stop" sign was installed for any of the approaches at the time field reconnaissance was performed for this intersection.

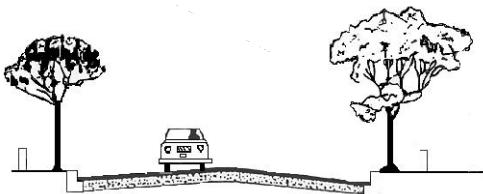

However, for analysis purposes, a cross-street stop has been assumed for the eastbound / westbound approaches of this intersection.

This Page Intentionally Left Blank

3 PROJECTED FUTURE TRAFFIC

3.1 TRAFFIC FORECAST METHODOLOGY

To assess future traffic conditions, project traffic is combined with existing traffic, ambient growth, and traffic from other surrounding developments. For Existing plus Project conditions, projected future traffic is represented by the sum of existing (2017) traffic and project traffic. For long-range 2035 Conditions, the future traffic forecast is based on the Orange County Traffic Analysis Model (OCTAM) and the Lake Elsinore version of the Riverside County Transportation Analysis Model (RIVTAM). For near-term conditions, the 2020 background traffic is estimated based on interpolation between estimated 2017 traffic and long-range 2035 traffic. This section discusses how projected future traffic from these various sources has been determined.

3.2 PROJECT TRAFFIC

3.2.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is attracted to and produced by a development. The traffic generation for the project is based upon the specific land uses which have been planned for these developments.

As stated previously, the applicant owns the two parcels located on north and south sides of Long Canyon Road. The following land use scenarios have been evaluated for the project:

- North Parcel: 29 single-family detached residential dwelling units
- South Parcel: 43 single-family detached residential dwelling units
- Vineyard with 5 employees

For the purposes of this traffic analysis, a total of 72 single-family detached residential dwelling units and a vineyard land use with 5 employees are included in the analysis.

Trip generation rates and resulting calculations for this project are shown in Table 3-1. The trip generation rates are based upon published data in the Institute of Transportation Engineers (ITE) *Trip Generation Manual (9th Edition)*. As shown on Table 3-1, the proposed project is expected to generate a total of 690 daily trips with 55 AM peak hour trips and 73 PM peak hour trips.

3.2.2 PROJECT TRIP DISTRIBUTION

Trip distribution represents the directional orientation of traffic to and from the project site. Trip distribution is heavily influenced by the geographical location of the site, the location of commercial, employment and recreational opportunities and the proximity to the regional freeway system. The directional orientation of traffic was determined by evaluating existing and proposed land uses and highways within the study area, and existing traffic volumes.

TABLE 3-1
PROJECT TRIP GENERATION SUMMARY
WITH ANCILLARY VINEYARD EMPLOYMENT

| Land Use | Proposed Quantity ¹ | Peak Hour | | | | | | Daily | | |
|------------------------------------|------------------------------------|-----------|-----|-----------|-----------|-----------|-----------|-----------|-----------|------------|
| | | AM | | | PM | | | | | |
| | | In | Out | Total | In | Out | Total | | | |
| ITE Code ² | TRIP GENERATION RATES | | | | | | | | | |
| 210 | Single Family Detached Residential | 72 | DU | 0.19 | 0.56 | 0.75 | 0.63 | 0.37 | 1.00 | 9.52 |

| TRIP GENERATION RESULTS | | | | | | | | | | |
| Single Family Detached Residential | | 72 | DU | 14 | 40 | 54 | 45 | 27 | 72 | 685 |
| Vineyard | | 5 | EMP | 1 | 0 | 1 | 0 | 1 | 1 | 5 |
| TOTAL PROJECT TRIPS | | | | 15 | 40 | 55 | 45 | 28 | 73 | 690 |

¹ DU = Dwelling Unit; TSF = Thousand Square Feet

² Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, 9th Edition (2012).

³ Rates derived from the traffic impact study for the Silver Rose Winery and Resort Project. The Silver Rose Winery and Resort project utilizes a measured daily rate of 3 trips per employee for a full production winery facility. For the purpose of this report, a weekday average of 1.0 trip per employee is assumed since the Project's vineyard use does not include a production/wine tasting facility and employment activity for vineyard maintenance occurs at irregular intervals.

The near-term 2020 trip distribution patterns for the project are graphically depicted on Exhibit 3-1. The long-range 2035 trip distribution patterns for the project are graphically depicted on Exhibit 3-2, with the SR-241 Toll Road anticipated to extend southerly beyond Ortega Highway, including an interchange at a future roadway named Cow Camp.

3.2.3 MODAL SPLIT

The traffic-reducing potential of public transit has not been considered in this report. Essentially the traffic projections are "conservative" in that public transit might be able to reduce the traffic volumes.

3.2.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the project site to the adjoining roadway system has been based upon the project's trip generation and trip distribution, and the proposed arterial highway and local street systems which would be in place by the time of the development's opening.

Project Near-Term (2020) Traffic

Based on the identified project traffic generation and near-term (2020) distribution, project-only near-term (2020) AM and PM peak hour intersection turning movement volumes are illustrated on Exhibits 3-3 and 3-4, respectively. The project-only near-term (2020) average daily traffic (ADT) volumes are shown on Exhibit 3-5.

Project Long-Range (2035) Traffic

Based on the identified project traffic generation and long-range (2035) distribution, project-only long-range (2035) AM and PM peak hour intersection turning movement volumes are illustrated on Exhibits 3-6 and 3-7, respectively. The project-only long-range (2035) average daily traffic (ADT) volumes are shown on Exhibit 3-8.

3.3 OTHER FUTURE TRAFFIC

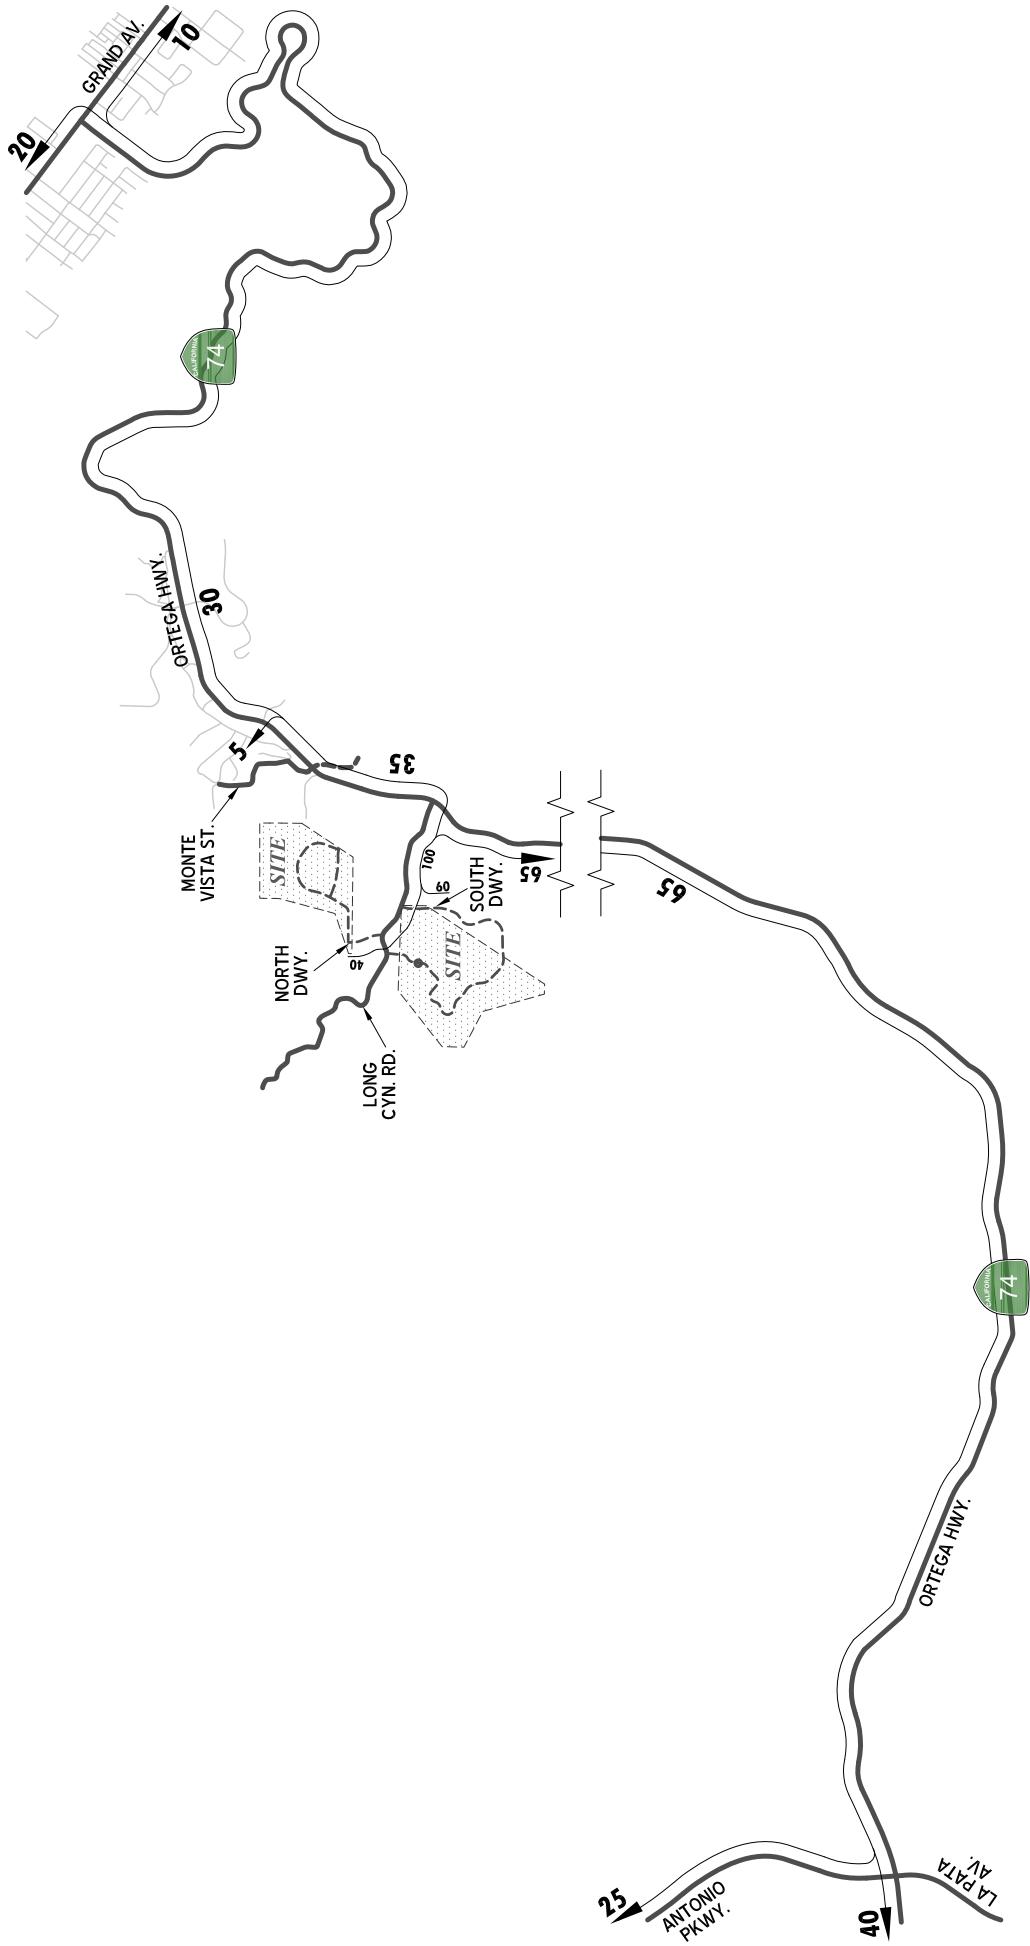

The long-range 2035 traffic conditions presented in this analysis were developed using the Orange County Traffic Analysis Model (OCTAM) and the Lake Elsinore version of the Riverside County Transportation Analysis Model (RIVTAM).

The future peak hour forecasts used in the traffic analyses were refined using the long-range traffic forecasts, along with existing peak hour traffic count data collected at intersection analysis locations. The traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. The initial estimate of the future peak hour turning movements has, therefore, been reviewed for reasonableness. The reasonableness checks performed include a review of traffic flow conservation in addition to a comparison with the existing actual counted volume. Where necessary, the initial raw model estimates have been adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes.

For near-term conditions, the 2020 background traffic is estimated based on an interpolation between existing (2017) traffic and long-range 2035 traffic.

3.4 TOTAL FUTURE TRAFFIC

This analysis assesses the following future traffic conditions:

- Existing (2017) Plus Project Conditions
- 2020 Without Project Conditions
- 2020 With Project Conditions
- 2035 Without Project Conditions
- 2035 With Project Conditions

3.4.1 EXISTING (2017) PLUS PROJECT TRAFFIC

Existing (2017) Plus Project Conditions AM and PM peak hour intersection volumes are shown on Exhibits 3-9 and 3-10, respectively. Average daily traffic (ADT) volumes for Existing (2017) Plus Project Conditions are presented in Exhibit 3-11.

3.4.2 2020 WITHOUT PROJECT TRAFFIC

2020 Without Project Conditions AM and PM peak hour intersection volumes are shown on Exhibits 3-12 and 3-13, respectively. Average daily traffic (ADT) volumes for 2020 Without Project Conditions are presented in Exhibit 3-14.

3.4.3 2020 WITH PROJECT TRAFFIC

2020 With Project Conditions AM and PM peak hour intersection volumes are shown on Exhibits 3-15 and 3-16, respectively. Average daily traffic (ADT) volumes for 2020 With Project Conditions are presented in Exhibit 3-17.

3.4.4 2035 WITHOUT PROJECT TRAFFIC

2035 Without Project Conditions AM and PM peak hour intersection volumes are shown on Exhibits 3-18 and 3-19, respectively. Average daily traffic (ADT) volumes for 2035 Without Project Conditions are presented in Exhibit 3-20.

3.4.5 2035 WITH PROJECT TRAFFIC

2035 With Project Conditions AM and PM peak hour intersection volumes are shown on Exhibits 3-21 and 3-22, respectively. Average daily traffic (ADT) volumes for 2035 With Project Conditions are presented in Exhibit 3-23.

4 TRAFFIC ANALYSIS METHODOLOGIES

Traffic operations are quantified through the determination of “Level of Service” (LOS). Level of Service is a qualitative measure of traffic operating conditions, whereby a letter grade “A” through “F” is assigned to an infrastructure facility (roadway segment, intersection, or freeway facility) representing progressively worsening traffic conditions. This section presents the LOS definition, LOS criteria, and the methodologies for the Intersection Operations Analysis and the Warrant Analysis Traffic Signal.

4.1 LEVEL OF SERVICE DEFINITION

The definitions of Level of Service for uninterrupted flow (flow unrestrained by the existence of traffic control devices) are:

- **LOS "A":** Completely free-flow conditions. The operation of vehicles is virtually unaffected by the presence of other vehicles, and operations are constrained only by the geometric features of the highway and by driver preferences. Maneuverability within the traffic stream is good. Minor disruptions to flow are easily absorbed without a change in travel speed.
- **LOS "B":** Free flow conditions, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS “A”, but drivers have slightly less freedom to maneuver. Minor disruptions are still easily absorbed, although local deterioration in LOS will be more obvious.
- **LOS "C":** The influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles. Minor disruptions can cause serious local deterioration in service, and queues will form behind any significant traffic disruption.
- **LOS "D":** The ability to maneuver is severely restricted due to traffic congestion. Travel speed is reduced by the increasing volume. Only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
- **LOS "E":** Operations at or near capacity, an unstable level. Vehicles are operating with the minimum spacing for maintaining uniform flow. Disruptions cannot be dissipated readily, often causing queues to form and service to deteriorate to LOS “F”.
- **LOS "F":** Forced or breakdown flow. It occurs either when vehicles arrive at a rate greater than the rate at which they are discharged or when the forecast demand exceeds the computed capacity of a planned facility. Although operations at these points – and on sections immediately downstream – appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

4.2 INTERSECTION LEVEL OF SERVICE CRITERIA

County of Orange has identified Level of Service (LOS) D as the minimum traffic level to be considered acceptable for County maintained intersections.

The County of Riverside has established, as a County-wide target, a LOS of C on all County-maintained roads and conventional State Highways. As an exception, LOS D may be allowed in Community Development areas, at intersections of any combination of Secondary Highways, Major Highways, Arterial Highways, Urban Arterial Highways, Expressways, or conventional State Highways. LOS E may be allowed in designated Community Centers to the extent that it would support transit-oriented development and pedestrian communities.

4.3 SIGNIFICANT PROJECT IMPACT CRITERIA

The County of Orange Growth Management Program (GMP) guidelines state that Project traffic volumes resulting in a 1% increase in the Volume/Capacity ratio of a deficient intersection (LOS "E" or "F") as compared to the No Project condition is considered significantly impacted and mitigation measures are required to reduce the project's impact to a level of insignificance.

Based on the County of Riverside traffic study guidelines, a "significant" direct traffic impact under California Environmental Quality Act (CEQA) occurs when the addition of project traffic as defined by the E+P scenario causes an intersection that operates at an acceptable level of service under Existing (2017) traffic conditions (i.e., LOS "D" or better) to fall to an unacceptable level of service (i.e., LOS "E" or "F"). Therefore, E+P traffic conditions are compared to Existing (2017) traffic conditions to identify significant project-related impacts according to the following criteria:

- If an intersection is projected to operate at an acceptable level of service (i.e., LOS "D" or better) under Existing (2017) traffic conditions and the addition of project traffic, as measured by 50 or more peak hour trips, is expected to cause the intersection to operate at an unacceptable level of service (i.e., LOS "E" or "F"), the impact is considered a significant direct impact.
- If an intersection is projected to operate at an unacceptable level of service (i.e., LOS "E" or "F") without the project, and the project contributes 50 or more peak hour trips, the impact is considered a significant direct impact.

A significant cumulative impact is identified when a facility is projected to operate below the level of service standards due to cumulative future traffic AND a project-related traffic increase as measured by 50 or more peak hour trips. Cumulative traffic impacts are created as a result of a combination of the proposed project together with other future developments contributing to the overall traffic impacts requiring additional improvements to maintain acceptable level of service operations with or without the project. Based on this criteria, the project is not anticipated to contribute a significant impact to the off-site intersections north and south of Long Canyon Road (including Antonio Parkway/Ortega Highway) since the project is anticipated to add less than 50 trips to these locations.

4.4 INTERSECTION OPERATIONS ANALYSIS METHODOLOGY

For existing study area intersections located with Orange County, the mitigation needs have been assessed based on the County of Orange Growth Management Plan (GMP) guidelines stated above in Section 4.3 of this report. However, for new study area intersections located with Orange County, the mitigation needs have been assessed based on improvements necessary to achieve acceptable LOS D.

For the study area intersections located with Riverside County (including the City of Lake Elsinore), the mitigation needs have been assessed based on improvements necessary to achieve acceptable levels of service.

4.4.1 INTERSECTION CAPACITY UTILIZATION (ICU) METHOD

For signalized intersections in the County of Orange, the Intersection Capacity Utilization (ICU) method is used to determine intersection performance. To calculate the ICU value for an intersection, the volume of traffic using the intersection is compared with the capacity of the intersection.

The ICU value is usually expressed as a decimal percent (e.g., 0.861). The decimal percent represents that portion of the hour required to provide sufficient capacity to accommodate all intersection traffic if all approaches operate at capacity.

A number of assumptions are required regarding specific input values to the ICU methodology. The specific assumptions include the use of a saturation flow rate of 1,700 vehicles per lane per hour. No capacity adjustments are applied for protected movements with dedicated lanes (including both right and left turns). A lost time factor of 5 percent is applied to the ICU calculations. Finally, a "de facto" right turn lane is assumed to exist when the outermost through lane is 19 feet or greater in width and parking is prohibited.

Signalized study area intersections within the County of Orange have been analyzed using the software package Traffix (Version 8.0 R1, 2008).

4.4.2 HIGHWAY CAPACITY MANUAL (HCM) METHOD

For unsignalized intersections within County of Orange and all intersections within County of Riverside, the current technical guide for the evaluation of traffic operations is the 2010 Highway Capacity Manual (HCM). It should be noted that signalized intersections within the County of Orange have also been evaluated using the HCM methodology per discussion with Caltrans. The HCM defines Level of Service as a qualitative measure, which describes operational conditions within a traffic stream, generally in terms of such factors as speed and travel time, freedom to maneuver, traffic interruptions, comfort and convenience, and safety. The criteria used to evaluate Level of Service (LOS) conditions vary based on the type of roadway and whether the traffic flow is considered interrupted or uninterrupted.

The definitions of level of service for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The level of service is typically dependent on the quality of traffic flow at the intersections along a roadway. The HCM methodology expresses the level of service at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control.

The study area intersections that are stop sign controlled with stop control on the minor street only have been analyzed using the HCM's unsignalized intersection methodology. For these intersections, the calculation of level of service is dependent on the frequency and size of gaps occurring in the traffic flow of the main street. Using data collected describing the intersection

configuration and traffic volumes at the study area locations, the level of service has been calculated. The level of service criteria for this type of intersection analysis is based on average total delay per vehicle for the worst minor street movement(s).

The levels of service for the HCM delay methodology, for signalized and unsignalized intersections, are defined as follows:

| Level of Service | Average Total Delay Per Vehicle (Seconds) | |
|-------------------------|--|---------------------|
| | Signalized | Unsignalized |
| A | 0 to 10.00 | 0 to 10.00 |
| B | 10.01 to 20.00 | 10.01 to 15.00 |
| C | 20.01 to 35.00 | 15.01 to 25.00 |
| D | 35.01 to 55.00 | 25.01 to 35.00 |
| E | 55.01 to 80.00 | 35.01 to 50.00 |
| F | 80.01 and up | 50.01 and up |

The intersection operations analyses are based on calculations using the traffic modeling and signal timing optimization software package Synchro (Version 9.1). Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the Chapter 18 of the HCM2010. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

For the intersection operations analysis, the study area includes the intersections shown previously on Exhibit 1-1. The existing conditions intersection operations analysis is presented in previous Section 2.5. The future conditions intersection operations analysis is presented in subsequent Section 5.2 of this report.

4.5 TRAFFIC SIGNAL WARRANTS ANALYSIS METHODOLOGY

To determine whether “significance” should be associated with unsignalized intersection operations, a supplemental traffic signal warrant analysis has been prepared. The term “signal warrants” refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the need for installation of a traffic signal at an otherwise unsignalized intersection. This study uses the signal warrant criteria presented in the latest edition of the Federal Highway Administration’s (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), as amended by the MUTCD 2012 California Supplement, for all study area intersections.

The signal warrant criteria for existing conditions are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The California MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. Specifically, the study utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Since Warrant 3 provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating at or above 40 miles per hour), study intersections qualifying for this specialized criteria have been clearly identified on the traffic signal warrant sheet. For the purposes of this study, the speed limit was the basis of determining whether Urban or Rural warrants were used for a given intersection.

For existing unsignalized intersections, peak hour based signal warrant analysis was performed. For new intersections, ADT-based signal warrant analysis was performed. The existing conditions traffic signal warrant analysis is presented in previous Section 2.4, and the future conditions traffic signal warrant analysis is presented in subsequent Section 5.1.

This Page Intentionally Left Blank

5 FUTURE CONDITIONS TRAFFIC ANALYSIS

This study assesses the traffic circulation of the proposed project for existing and future traffic conditions, based on the following analyses:

- Traffic Signal Warrant Analysis
- Intersection Operations Analysis

5.1 FUTURE CONDITIONS TRAFFIC SIGNAL WARRANT ANALYSIS

A traffic signal warrant analysis has been conducted for each of the following future conditions, based on average daily traffic (ADT) volumes:

- Existing (2017) Plus Project Conditions
- 2020 Without Project Conditions
- 2020 With Project Conditions
- 2035 Without Project Conditions
- 2035 With Project Conditions

A detailed discussion of the methodologies behind the traffic signal warrant analysis is presented in previous Section 4.4 of this report.

Traffic signal warrant analysis is assessed at the following study area intersections because they are either currently unsignalized or future intersections:

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 5 | South Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 6 | North Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 7 | Ortega Hwy. (SR-74) (NS) / Cow Camp (EW) – Future | Unincorporated County of Orange |

5.1.1 TRAFFIC SIGNAL WARRANT ANALYSIS, EXISTING (2017) PLUS PROJECT CONDITIONS

Based on Existing (2017) Plus Project Conditions, unsignalized study area intersections are not projected to meet traffic signal warrants.

Traffic signal warrant analysis worksheets for Existing (2017) Plus Project Conditions are included in Appendix 5.1 of this report.

5.1.2 TRAFFIC SIGNAL WARRANT ANALYSIS, 2020 WITHOUT PROJECT CONDITIONS

Based on 2020 Without Project Conditions, unsignalized study area intersections are not projected to meet traffic signal warrants.

Traffic signal warrant analysis worksheets for 2020 Without Project Conditions are included in Appendix 5.2 of this report.

5.1.3 TRAFFIC SIGNAL WARRANT ANALYSIS, 2020 WITH PROJECT CONDITIONS

Based on 2020 With Project Conditions, unsignalized study area intersections are not projected to meet traffic signal warrants.

Traffic signal warrant analysis worksheets for 2020 With Project Conditions are included in Appendix 5.3 of this report.

5.1.4 TRAFFIC SIGNAL WARRANT ANALYSIS, 2035 WITHOUT PROJECT CONDITIONS

Based on 2035 Without Project Conditions, the following new intersection is projected to meet traffic signal warrants:

| ID | Intersection Location | Jurisdiction |
|----|---|---------------------------------|
| 7 | Ortega Hwy. (SR-74) (NS) / Cow Camp (EW) – Future | Unincorporated County of Orange |

Traffic signal warrant analysis worksheets for 2035 Without Project Conditions are included in Appendix 5.4 of this report.

5.1.5 TRAFFIC SIGNAL WARRANT ANALYSIS, 2035 WITH PROJECT CONDITIONS

Based on 2035 With Project Conditions, no unsignalized intersections are projected to meet traffic signal warrants, in addition to the ones that are already warranted under previous conditions (2035 Without Project). Traffic signals are not warranted at the following intersections:

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 5 | South Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 6 | North Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |

Traffic signal warrant analysis worksheets for 2035 With Project Conditions are included in Appendix 5.5 of this report.

5.2 FUTURE CONDITIONS INTERSECTION OPERATIONS ANALYSIS

The intersection operations analysis for the following future conditions has been evaluated, based on Intersection Capacity Utilization (ICU) and Highway Capacity Manual (HCM) methods.

- Existing (2017) Plus Project Conditions
- 2020 Without Project Conditions
- 2020 With Project Conditions
- 2035 Without Project Conditions
- 2035 With Project Conditions

The discussion regarding the intersection operations analysis methodologies is presented in previous Section 4.3 of this report.

5.2.1 INTERSECTION OPERATIONS ANALYSIS, EXISTING (2017) PLUS PROJECT CONDITIONS

Table 5-1 summarizes the intersection operations analysis results at the study area intersections for Existing (2017) Plus Project Conditions, based on the existing geometrics at the intersections. AM and PM peak hour intersection turning movement volumes for Existing (2017) With Project Conditions are shown previously on Exhibits 3-9 and 3-10, respectively.

As shown in Table 5-1, study area intersections are anticipated to operate at acceptable levels of service with existing geometrics, during the peak hours for Existing (2017) Plus Project Conditions. However, since there is a high volume for the northbound and southbound through traffic volume along Ortega Highway (SR-74), a dedicated left turn lane is recommended to serve as a refuge lane (sanctuary) for the northbound left turn movements. A more detailed discussion is included in section 6 of this report.

Existing (2017) Plus Project Conditions intersection operations analysis worksheets are included in Appendix 5.6 of this report.

5.2.2 INTERSECTION OPERATIONS ANALYSIS, 2020 WITHOUT PROJECT CONDITIONS

Table 5-2 summarizes the intersection operations analysis results at the study area intersections for 2020 Without Project Conditions, based on the existing geometrics at the intersections. AM and PM peak hour intersection turning movement volumes for 2020 Without Project Conditions are shown previously on Exhibits 3-12 and 3-13, respectively.

As shown in Table 5-2, study area intersections are anticipated to operate at acceptable levels of service with existing geometrics, during the peak hours for 2020 Without Project Conditions.

2020 Without Project Conditions intersection operations analysis worksheets are included in Appendix 5.7 of this report.

5.2.3 INTERSECTION OPERATIONS ANALYSIS, 2020 WITH PROJECT CONDITIONS

Table 5-3 summarizes the intersection operations analysis results at the study area intersections for 2020 With Project Trade Conditions, based on the existing geometrics at the intersections. AM and PM peak hour intersection turning movement volumes for 2020 With Project Conditions are shown previously on Exhibits 3-15 and 3-16, respectively.

As shown in Table 5-3, study area intersections are anticipated to operate at acceptable levels of service with existing geometrics, during the peak hours for 2020 With Project Conditions.

Similar to Existing Plus Project conditions, a dedicated northbound left turn lane is recommended at the intersection of Long Canyon Road and Ortega Highway (SR-74) to serve as a refuge lane. A more detailed discussion is included in section 6 of this report.

2020 With Project Conditions intersection operations analysis worksheets are included in Appendix 5.8 of this report.

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; 1 = Improvement

² Volume/Capacity Ratio and Level of Service calculated using the TRAFFIX operation analysis software, Traffix Version 8.0 R1 (2008), based on the Intersection Capacity Utilization (ICU) method.

³ Delay (in seconds) and Level of Service calculated using Synchro 9 analysis software based on the 2010 Highway Capacity Manual (HCM) method.

⁴ LOS = Level of Service based on HCM methodology.

⁵ TS = Traffic Signal; CSS = Cross Street Stop

⁶ Although the intersection of Ortega Highway (SR-74) / Long Canyon Road operates at an acceptable level of service, a left turn pocket is recommended on Ortega Highway (SR-74) to provide a refuge lane for the northbound left turn movements due to the high through traffic volume along Ortega Highway (SR-74).

⁷ No "Stop" sign was installed for any of the approaches at the time field reconnaissance was performed for this intersection.

However, for analysis purposes, a cross-street stop has been assumed for the eastbound / westbound approaches of this intersection.

| 3 | Ortega Hwy. (SR-74) (NS) at: • Monte Vista St. (EW) ⁷ | CSS | 0 | 1 | 0 | 0 | 1 | 0 | 0 | 1 | 0 | 0 | 1 | 0 | n/a | n/a | 18.8 | 26.4 | C | D | D |
| 4 | Ortega Hwy. (SR-74) (NS) at: • Grand Ave. (EW) | TS | 2 | 0 | 1> | 0 | 0 | 0 | 0 | 1 | 2> | 1 | 1 | 0 | n/a | n/a | 15.6 | 29.6 | B | C | D |
| 5 | South Dwy. (NS) at: • Long Canyon Rd. (EW) | CSS | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 1 | 0 | n/a | n/a | 8.5 | 8.6 | A | A | D |
| 6 | North Dwy. (NS) at: • Long Canyon Rd. (EW) | CSS | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 1 | 0 | 0 | 1 | 0 | n/a | n/a | 8.7 | 8.8 | A | A | D |

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; 1 = Improvement

² Volume/Capacity Ratio and Level of Service calculated using the TRAFFIX operation analysis software, Traffix Version 8.0 R1 (2008), based on the Intersection Capacity Utilization (ICU) method.

³ Delay (in seconds) and Level of Service calculated using Synchro 9 analysis software based on the 2010 Highway Capacity Manual (HCM) method.

⁴ LOS = Level of Service based on HCM methodology.

⁵ TS = Traffic Signal; CSS = Cross Street Stop

⁶ Although the intersection of Ortega Highway (SR-74) / Long Canyon Road operates at an acceptable level of service, a left turn pocket is recommended on Ortega Highway (SR-74) to provide a refuge lane for the northbound left turn movements due to the high through traffic volume along Ortega Highway (SR-74).

⁷ No "Stop" sign was installed for any of the approaches at the time field reconnaissance was performed for this intersection.

However, for analysis purposes, a cross-street stop has been assumed for the eastbound / westbound approaches of this intersection.

5.2.4 INTERSECTION OPERATIONS ANALYSIS, 2035 WITHOUT PROJECT CONDITIONS

Table 5-4 summarizes the intersection operations analysis results at the study area intersections for 2035 Without Project Conditions, based on the respective existing geometrics at the intersections. AM and PM peak hour intersection turning movement volumes for 2035 Without Project Conditions are shown previously on Exhibits 3-18 and 3-19, respectively.

As shown in Table 5-4, the following intersections are anticipated to operate at unacceptable levels of service with existing geometrics, during the peak hours for 2035 Without Project Conditions:

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 1 | Antonio Pkwy. - La Pata Av. (NS) / Ortega Hwy. (SR-74) (EW) | Unincorporated County of Orange |
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 4 | Ortega Hwy. (SR-74) (NS) / Grand Av. (EW) | City of Lake Elsinore |

For the intersection of Ortega Highway (SR-74) and Long Canyon Road a left turn pocket is recommended on Ortega Highway (SR-74) to provide a refuge lane (sanctuary) for the northbound left turn movements due to the high through traffic volume along Ortega Highway (SR-74).

For the intersection of Ortega Highway and Monte Vista Street, it should be noted that the deficient level of service is based on the nominal approach volumes on Monte Vista Street and is not anticipated to disrupt the flow of traffic along Ortega Highway (SR-74). In addition, the east leg of this intersection currently exists as a gated (private) driveway, therefore improvements are not recommended.

Exhibit 5-1 summarizes the intersection improvements for 2035 conditions without the project which have been anticipated for the Rancho Mission Viejo (Ranch Plan) and City of Lake Elsinore General Plan.

2035 Without Project Conditions intersection operations analysis worksheets are included in Appendix 5.9 of this report.

5.2.5 INTERSECTION OPERATIONS ANALYSIS, 2035 WITH PROJECT CONDITIONS

Table 5-5 summarizes the intersection operations analysis results at the study area intersections for 2035 With Project Conditions, based on the respective existing geometrics at the intersections. AM and PM peak hour intersection turning movement volumes for 2035 With Project Conditions are shown previously on Exhibits 3-21 and 3-22, respectively.

TABLE 5-4

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; 1 = Improvement

² Volume/Capacity Ratio and Level of Service calculated using the TRAFFIX operation analysis software, Traffix Version 8.0 R1 (2008), based on the Intersection Capacity Utilization (ICU) method.

³ Delay (in seconds) and Level of Service calculated using Synchro 9 analysis software based on the 2010 Highway Capacity Manual (HCM) method.

⁴ LOS = Level of Service

⁵ TS = Traffic Signal; CSS = Cross Street Stop

⁶ A left turn pocket is recommended on Ortega Highway (SR-74) to provide a refuge lane for the northbound left turn movements due to the high through traffic volume along Ortega Highway (SR-74).

⁷ No "Stop" sign was installed for any of the approaches at the time field reconnaissance was performed for this intersection.

However, for analysis purposes, a cross-street stop has been assumed for the eastbound / westbound approaches of this intersection.

⁸ It should be noted that the deficient LOS is based on the nominal approach volumes on Monte Vista Street and is not anticipated to disrupt the flow of traffic along Ortega Highway (SR-74). In addition, the east leg of this intersection currently exists as a gated driveway therefore further improvements are not recommended.

As shown in Table 5-5, the following intersections are anticipated to operate at deficient levels of service with existing geometrics, during the peak hours for 2035 With Project Conditions:

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 1 | Antonio Pkwy. - La Pata Av. (NS) / Ortega Hwy. (SR-74) (EW) | Unincorporated County of Orange |
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 4 | Ortega Hwy. (SR-74) (NS) / Grand Av. (EW) | City of Lake Elsinore |

For the intersection located in Orange County, no improvements are required for conditions with the project traffic based the County of Orange GMP guidelines.

For the intersection of Ortega Highway (SR-74) and Monte Vista Street, it should be noted that the deficient level of service is based on the nominal approach volumes on Monte Vista Street and is not anticipated to disrupt the flow of traffic along Ortega Highway (SR-74). In addition, the east leg of this intersection currently exists as a gated (private) driveway and the project is anticipated to add less than 50 trips at this intersection, therefore improvements are not recommended.

For the intersection of Ortega Highway (SR-74) and Long Canyon Road a left turn pocket is recommended on Ortega Highway (SR-74) to provide a refuge lane (sanctuary) for the northbound left turn movements due to the high through traffic volume along Ortega Highway (SR-74).

For 2035 With Project conditions, no offsite improvements are anticipated in addition to the ones identified under 2035 Without Project Conditions (See Exhibit 5-1). The 2035 With Project Conditions intersection operations analysis worksheets are included in Appendix 5.10 of this report.

5.3 SIGNIFICANT PROJECT IMPACT ASSESSMENT

For the study area intersections located with Orange County, the mitigation needs have been assessed based on the County of Orange Growth Management Plan (GMP) guidelines which state that the Project traffic resulting in a 1% increase in the Volume/Capacity (V/C) Ratio of a deficient intersection (Level of Service "E" or "F") as compared to the No Project condition is considered significantly impacted and mitigation measures are required to reduce the project's impact to a level of insignificance. The discussion regarding the significant impact criteria is included in previous Section 4.3 of this report. The V/C ratios for the analysis scenarios, as well as project-related increases in the V/C ratios are summarized in Table 5-6.

As shown in Table 5-6, the proposed project is not anticipated to contribute a significant impact at the study area intersections located within the orange county.

For study intersections in Riverside County, if an intersection is projected to operate at an unacceptable level of service (i.e., LOS "E" or "F") without the project, and the project contributes 50 or more peak hour trips, the impact is considered a significant direct impact. Based on this criteria, the project is not anticipated to contribute a significant impact since the project is anticipated to add less than 50 trips to the deficient intersections.

EXHIBIT 5-1
**RECOMMENDED IMPROVEMENTS FOR
 2035 WITHOUT PROJECT CONDITIONS**

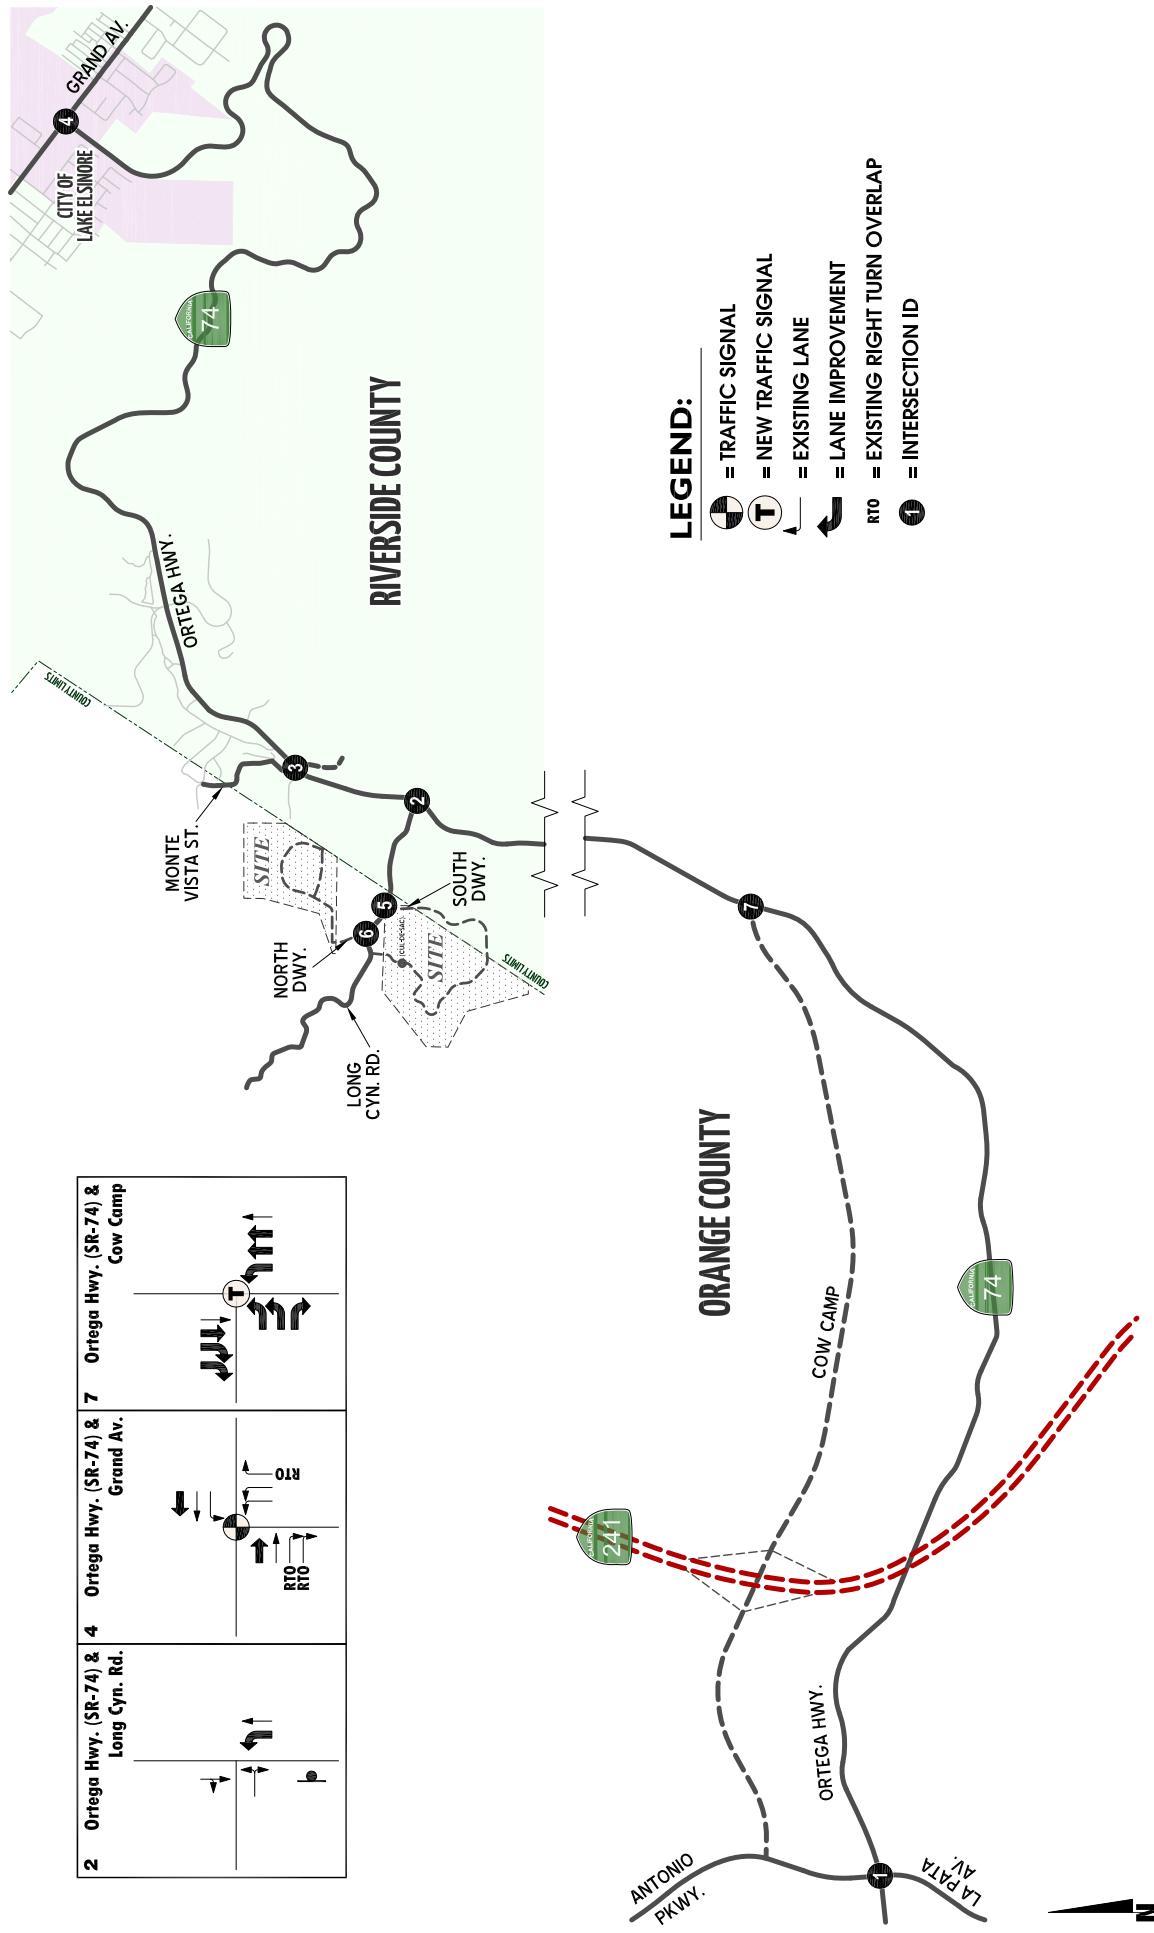

TABLE 5-6
Orange County CMP Significant Project Impact Summary

| Traffic Condition | Intersection | Without Project ICU/LOS ¹ | | With Project ICU/LOS ¹ | | Change in ICU | | Significant Project Impact ² | |
|-------------------|---|---|---------|--------------------------------------|---------|------------------|-------|--|-----------------|
| | | AM | PM | AM | PM | AM | PM | AM | PM |
| Existing (2017) | #1 Antonio Pkwy. (NS) at: • Ortega Hwy (SR-74) (EW) - Existing Geometry | 0.656 D | 0.606 C | 0.661 D | 0.618 C | 0.005 | 0.012 | No ³ | No ³ |
| 2020 | #1 Antonio Pkwy. (NS) at: • Ortega Hwy (SR-74) (EW) - Existing Geometry | 0.687 D | 0.632 C | 0.692 D | 0.644 C | 0.005 | 0.012 | No ³ | No ³ |
| 2035 | #1 Antonio Pkwy. (NS) at: • Ortega Hwy (SR-74) (EW) - Existing Geometry | 0.914 F | 0.865 D | 0.918 F | 0.865 D | 0.004 | 0.000 | No | No ³ |
| | #7 Ortega Hwy. (SR-74) (NS) at: • Cow Camp (EW) - With Improvements | 0.607 B | 0.627 B | 0.613 B | 0.634 B | 0.006 | 0.007 | No ³ | No ³ |

¹ ICU = Intersection Capacity Utilization; LOS = Level of Service

² A project is considered to have a significant impact on a study intersection when it causes the ICU to increase 1% or more at an intersection that are projected to operate at Level of Service "E" or "F" without the proposed project.

³ Level of Service "D" or better; No significant project impact.

6 FINDINGS AND CONCLUSIONS

This study assesses the traffic circulation of the proposed The Preserve at San Juan project. The conclusions and recommendations are summarized below.

6.1 PROJECT TRIP GENERATION

The trip generation for the proposed project is shown previously in Table 3-1. The proposed project is expected to generate a total of 690 daily trips with 55 AM peak hour trips and 73 PM peak hour trips.

6.2 TRAFFIC IMPACTS AND LEVEL OF SERVICE

For Existing (2017), Existing (2017) Plus Project, and 2020 Without and With Project Conditions, study area intersections are operating at acceptable levels of service, during the peak hours.

For 2035 Without Project Conditions, the following intersections are anticipated to operate at unacceptable levels of service with existing geometrics, during the peak hours:

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 1 | Antonio Pkwy. - La Pata Av. (NS) / Ortega Hwy. (SR-74) (EW) | Unincorporated County of Orange |
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 4 | Ortega Hwy. (SR-74) (NS) / Grand Av. (EW) | City of Lake Elsinore |

For 2035 With Project Conditions, the study area intersection levels of service do not change during the peak hours in comparison to “without project” conditions.

6.3 TRAFFIC SIGNAL WARRANT ANALYSIS RESULTS

Traffic signal warrant analysis has been performed for the following study area intersections:

| ID | Intersection Location | Jurisdiction |
|----|---|------------------------------------|
| 2 | Ortega Hwy. (SR-74) (NS) / Long Canyon Rd. (EW) | Unincorporated County of Riverside |
| 3 | Ortega Hwy. (SR-74) (NS) / Monte Vista St. (EW) | Unincorporated County of Riverside |
| 5 | South Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 6 | North Dwy. (NS) / Long Canyon Rd. (EW) – Future | Unincorporated County of Orange |
| 7 | Ortega Hwy. (SR-74) (NS) / Cow Camp (EW) – Future | Unincorporated County of Orange |

Based on the traffic signal warrants presented in Section 5 of this report, only the intersection of Ortega Highway (SR-74) / Cow Camp is anticipated to meet warrants under 2035 without project conditions.

6.4 CIRCULATION RECOMMENDATIONS

Pursuant to the goal of providing green infrastructure and minimizing the use of non-permeable surfaces such as paved roads, minimum pavement widths needed to efficiently serve project traffic are proposed, for the project access road and on-site roads.

6.4.1 ON-SITE IMPROVEMENTS

- For Vesting Tentative Tract (VTT) 17269 (North Parcel), request deviation to OCPW Std Plan 1107 to allow "A" Street and "C" Street to be constructed with curb to curb widths of 32' and 28' respectively instead of the required 36'.
- For VTT 17270 (South Parcel), request deviation to OCPW Std Plan 1107 to allow "B", "C" & "E" Streets to be constructed with curb to curb widths of 28, 32' and 28' respectively instead of the required 36'.
- Install cross-street stop controls at the project access road intersection on Long Canyon Road for the northbound/southbound approaches, and construct each project access road with the approach geometrics (minimum) of one shared left-through-right turn lane (northbound approach and southbound approach).
- Prior to issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, and at all driveways in a manner meeting the approval of the Manager, Traffic Engineer. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.
- Prior to the recordation of a subdivision map, the subdivider shall place a note on the map, in a manner that meets the approval of the Manager, Subdivision and Grading Services that states: "The private streets constructed within this map shall be owned, operated and maintained by the developer, successor or assigns. The County of Orange shall have no responsibility therefore unless pursuant to appropriate sections of the Streets and Highway Code of the State of California, the said streets have been accepted into the County Road System by appropriate resolution of the Orange County Board of Supervisors".
- Prior to the recordation of a subdivision map, the subdivider shall design and construct the following improvements in accordance with plans and specifications meeting the approval of the Manager, Subdivision and Grading.
 - (a) Streets, bus stops, on-road bicycle trails, street names, signs, striping and stenciling.
 - (b) The water distribution system and appurtenance that shall also conform to the applicable laws and adopted regulations enforced by the County Fire Chief.
 - (c) Underground utilities (including gas, cable, electric and telephone), street lights and mailboxes.

6.4.2 OFF-SITE IMPROVEMENTS

For VTT 17269 (North Parcel), proof of legal access to VTT 17269 thru "A" Street between Long Canyon Road and the tract boundary is to be provided prior to approval of the tract map.

For VTT 17270 (South Parcel), proof of legal access to the tract from Long Canyon Rd over that portion of "A" Street located within Riverside County is required prior to approval of the tract map.

Prior to the recordation of a subdivision map, the subdivider shall request deviation to OCPW Std Plan 1109 to allow Long Canyon Rd from "A" Street to Ortega Hwy to be maintained with curb to curb width of 26' instead of the typically required 40', in a manner meeting the approval of the Manager, Traffic Engineering. Essentially, approval of this deviation would allow the existing pavement to remain, rather than requiring widening of the existing Long Canyon Road. Additional pavement for roadway widening along this segment is not necessary to provide adequate level of service. The benefits of maintaining the existing roadway width include the avoidance of increases in the impermeable surface area and less disruption of existing hydrology. It is also noteworthy that the project does not require on-street parking on this low volume access road.

Prior to the recordation of a subdivision map, the subdivider shall construct the following improvements on Ortega Hwy in a manner meeting the approval of the Manager, Traffic Engineering:

- (a) A northbound 12' striped median refuge lane @ Long Canyon Rd
- (b) A northbound 12' left turn lane @ Long Canyon Rd
- (c) Provide a minimum 22' southbound travel lane from Long Canyon Rd to 160' northerly.

Access design features at the Long Canyon Road/Ortega Highway (SR-74) intersection will be further evaluated as street improvement plans are prepared pursuant to these recommendations. Lane recommendations include 1 northbound left turn lane, 1 northbound through lane, 1 southbound shared through-right lane, and 1 eastbound shared left-right lane.

The following off-site improvements have been anticipated for the Rancho Mission Viejo (Ranch Plan) and City of Lake Elsinore General Plan:

Ortega Highway (SR-74) (NS) / Grand Avenue (EW) [#4]

Jurisdiction: City of Lake Elsinore

- Construct a 2nd eastbound through lane
- Construct a 2nd westbound through lane

Ortega Highway (SR-74) (NS) / Cow Camp (EW) [#6]

Jurisdiction: County of Orange

- Install a traffic signal
- Construct a northbound left turn lane
- Construct a 2nd and 3rd northbound through lanes
- Construct a 2nd southbound through lane
- Construct a 1st and 2nd southbound right turn lanes
- Construct a 1st and 2nd eastbound left turn lanes
- Construct an eastbound right turn lane.

6.5 IMPROVEMENT FUNDING MECHANISMS

Table 6-1 summarizes the recommended intersection improvements and the applicable improvement funding sources for each intersection.

There are several funded roadway improvement programs that are in place to improve the roadway infrastructure in the study area. For the County of Orange, the following two roadway improvement programs are currently in place: the Avenida La Pata Supplemental Roadway Fee Program and the South County Roadway Improvement Program. For the County of Riverside, there is the Transportation Uniform Mitigation Fees (TUMF) program. These programs provide key funding sources for General Plan roadway improvements in the study area.

The Avenida La Pata Supplemental Roadway Fee Program was adopted by the County of Orange Board of Supervisors, and it is administered by the County of Orange Resources and Development Management Department (RDMD). The purpose of this fee program is to construct Avenida La Pata from Ortega Highway to the City of San Clemente city limits.

The South County Roadway Improvement Program (SCRIP) (October 18, 2005) was adopted by the County of Orange with the approval of the General Plan Amendment for the project proposed by Rancho Mission Viejo and commonly referred to as the “Ranch Plan”. The SCRIP establishes a comprehensive framework for implementing transportation improvements throughout an “area of benefit” in south Orange County. The following study area roadway facilities are programmed for improvement under SCRIP (see Appendix 6.1):

- Ortega Highway from I-5 Freeway to Antonio Parkway/La Pata Avenue
- Antonio Parkway from Ortega Highway to Ladera Ranch
- La Pata Avenue from Ortega Highway to Avenida Hermosa
- Cow Camp from Antonio Parkway to Ortega Highway
- Intersection of Antonio Parkway/La Pata Avenue and Ortega Highway

The Transportation Uniform Mitigation Fees (TUMF) program is adopted by the Riverside County Board of Supervisors, and it is administered by the Western Riverside County Council of Governments (WRCOG). TUMF, which includes a network of regional facilities, endeavors to spread the cost of improvements on a regional basis through participation of the County and individual cities. The fees are collected as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases. The following study area roadway segments are programmed for improvement under TUMF (see Appendix 6.2):

- Ortega Highway south of Grand Avenue
- Grand Avenue

TABLE 6-1

IMPROVEMENTS AND FUNDING SOURCES

| Intersection | Jurisdiction | Intersection Improvements ¹ | | | | Funding Source ² |
|--|-----------------------|--|----------------------|-------------------|---|-----------------------------|
| | | 2017 With Project | 2017 Without Project | 2017 With Project | 2035 Without Project | |
| 2 Ortega Hwy. (SR-74) (NS) at: • Long Canyon Rd. (EW) | City of Lake Elsinore | • NB left turn lane | • None | • Same | • Same | • Same Project |
| 4 Ortega Hwy. (SR-74) (NS) at: • Grand Ave. (EW) | City of Lake Elsinore | • None | • None | • None | • 2nd EB through lane • 2nd WB through lane | TUMF |
| 5 South Dwy. (NS) at: • Long Canyon Rd. (EW) | County of Orange | • NB stop sign • NB travel lane | • None | • Same Same | • None | • Same Project |
| 6 North Dwy. (NS) at: • Long Canyon Rd. (EW) | County of Orange | • SB stop sign • SB travel lane | • None | • Same Same | • None | • Same Project |
| 7 Ortega Hwy. (SR-74) (NS) at: • Cow Camp (EW) | County of Orange | • Does not exist | • Does not exist | • Does not exist | • Traffic Signal • NB left turn lane • 2nd NB through lane • 3rd NB through lane • 2nd SB through lane • 2 SB right turn lanes • 2 EB left turn lanes • 1 EB right turn lane | SCRIP SCRIP |

¹ NB = Northbound; SB = Southbound; EB = Eastbound; WB = Westbound² Project = 100% Project Responsibility; SCRIP = South County Roadway Improvement Program (Orange County);

TUMF = Transportation Uniform Mitigation Fees (Western Riverside County)

6.6 PROJECT FAIR SHARE CONTRIBUTION

The project fair share calculations are based on the proportion of project peak hour traffic relative to the total new peak hour traffic volumes at off-site improvement locations, as shown in Table 6-2. Total new traffic is calculated based on the total future (2035 With project) traffic minus the Existing (2017) traffic. As shown in Table 6-2, the project generally contributes less than 2% to new traffic at the study area intersections.

TABLE 6-2
PROJECT FAIR SHARE CALCULATIONS

| Intersection | | Peak Hour | Existing (2017) Traffic | Project Only (2035) Traffic | 2035 With Project Traffic | Total New Traffic ¹ | Project Fair Share ² (%) |
|--------------|--|-----------|-------------------------|-----------------------------|---------------------------|--------------------------------|-------------------------------------|
| 1 | Antonio Pkwy/La Pata Ave. (NS) at: • Ortega Hwy. (SR-74) (EW) | AM | 4,695 | 19 | 7,002 | 2,307 | 0.8% |
| | | PM | 3,988 | 26 | 6,536 | 2,548 | 1.0% |
| 2 | Ortega Hwy. (SR-74) (NS) at: • Long Canyon Rd. (EW) | AM | 880 | 55 | 1,070 | 190 | 28.9% |
| | | PM | 1,393 | 73 | 1,919 | 526 | 13.9% |
| 3 | Ortega Hwy. (SR-74) (NS) at: • Monte Vista St. (EW) | AM | 868 | 19 | 1,148 | 280 | 6.8% |
| | | PM | 1,395 | 26 | 1,866 | 471 | 5.5% |
| 4 | Ortega Hwy. (SR-74) (NS) at: • Grand Ave. (EW) | AM | 1,974 | 17 | 3,223 | 1,249 | 1.4% |
| | | PM | 2,376 | 23 | 4,208 | 1,832 | 1.3% |
| 7 | Ortega Hwy. (SR-74) (NS) at: • Cow Camp (EW) | AM | 865 | 36 | 2,986 | 2,121 | 1.7% |
| | | PM | 1,370 | 48 | 3,738 | 2,368 | 2.0% |

¹ Total New Traffic = 2035 With Project - Existing (2017) Traffic

² Percent Project Fair Share = Project Traffic / Total New Traffic

6.7 SIGNIFICANT PROJECT IMPACT

For the study area intersections located within Orange County, the mitigation needs have been assessed based on the County of Orange Growth Management Plan (GMP) guidelines which state that the Project traffic resulting in a 1% increase in the Volume/Capacity (V/C) Ratio of a deficient intersection (Level of Service "E" or "F") as compared to the No Project condition is considered significantly impacted and mitigation measures are required to reduce the project's impact to a level of insignificance.

For intersections in Riverside County, if an intersection is projected to operate at an unacceptable level of service (i.e., LOS "E" or "F") without the project, and the project contributes 50 or more peak hour trips, the impact is considered a significant direct impact. A significant cumulative impact is identified when a facility is projected to operate below the level of service standards due to cumulative future traffic AND a project-related traffic increase as measured by 50 or more peak hour trips. Cumulative traffic impacts are created as a result of a combination of the proposed project together with other future developments contributing to the overall traffic impacts requiring additional improvements to maintain acceptable level of service operations with or without the project.

As mentioned previously in Section 5 of this report, the proposed project is not anticipated to contribute a direct significant impact or cumulative impact at the study area intersections.

SOUTH COUNTY ROADWAY IMPROVEMENT PROGRAM (SCRIP) – PART I

I. INTRODUCTION AND PROGRAM OVERVIEW

The South County Roadway Improvement Program (SCRIP), establishes a comprehensive framework for implementing transportation improvements throughout an “area of benefit” in south Orange County, as defined below. The SCRIP will be adopted by the County concurrently with the approval of the General Plan Amendment/Zone Change (“GPA/ZC”) for that project proposed by Rancho Mission Viejo (RMV) and commonly referred to as the “Ranch Plan,” and will establish the basic procedural and administrative protocols for implementing the transportation improvement program outlined in the Ranch Plan EIR (EIR No. 589). Participation in the SCRIP will be a condition of approval for the Ranch Plan development. RMV also will enter into a development agreement (Ranch Plan Development Agreement) with the County that, among other things, will describe RMV’s further commitment to the SCRIP over and above its fair share obligations pursuant to the GPA/ZC conditions of approval. In the future, the scope of the SCRIP could be expanded to include transportation improvements beyond those to be implemented in conjunction with the Ranch Plan project.

The SCRIP includes a funding program that is intended to complement, not replace, existing road fee programs in the south Orange County area. These existing fee programs include the Major Thoroughfare and Bridge Fee Program for the San Joaquin Hills and Foothill/Eastern Transportation Corridors established by the Orange County Board of Supervisors in October 1984. That program, now implemented by the Transportation Corridor Agencies, establishes developer obligations for the financing of the Transportation Corridors and is separate from the SCRIP.

Local and Regional Improvements

The SCRIP identifies three categories of road system improvements for construction: (1) “local County improvements” (improvements to arterials, including intersections and widening) within the County’s jurisdiction, (2) “local City improvements” within one or more cities’ jurisdictions, and (3) “regional improvements” (improvements to state highway facilities). These improvements (collectively, the “SCRIP Improvements”) are identified in the SCRIP and will be implemented consistent with the Ranch Plan Improvement Phasing Plan (Table 4 attached) with the goal of maintaining specified LOS goals/conditions at certain identified locations significantly impacted by traffic from the Ranch Plan project and other projects.

SCRIP Part 1

The SCRIP will be adopted in two parts. Part 1, which is described herein and which is the subject of the County’s present action, sets forth the overall goals and objectives of the SCRIP, defines the area of benefit, and establishes the basic procedural and administrative protocols to be followed in carrying out the program. The adoption of Part 1 of the SCRIP by the County also provides a complete framework for (1) implementing the transportation improvement program outlined in the Ranch Plan EIR and Ranch Plan Development Agreement for local County improvements, and (2) funding and completing certain other local City and regional improvements that are to be funded whether or not the affected cities/agencies elect to participate in the SCRIP. This framework includes mechanisms for determining the amount and timing of payments of monies committed by the Ranch Plan, and the methods for applying these monies towards the specified improvements.

It should be noted that, for those improvements located outside the County's jurisdiction, implementation will be contingent on the County reaching agreement with the affected cities/agencies. Thus, all monies collected for their funding will be held by the County in a trust account until the affected city/cities and/or agency/agencies (as applicable) has/have entered into an agreement with the County regarding implementation of the improvement(s). If an agreement for any improvement has not been reached with the affected city/agency within 15 years of the effective date of the SCRIP, the County will thereafter endeavor to enter into an agreement with OCTA that will provide for the application of the monies collected for those improvements towards regional improvements within the Area of Benefit.

SCRIP Part 2

Part 2 of the SCRIP, when adopted, would complement Part 1 with regard to (1) the identified local City improvements that require the participation of the cities located within the Area of Benefit for their full funding and implementation (*i.e.*, improvements that require additional funding from public sources to supplement Ranch Plan funding), and (2) the identified regional improvements that require the participation of Caltrans and/or OCTA and/or the TCA and/or the cities for their full funding and implementation (*i.e.*, improvements that require additional funding from public sources to supplement Ranch Plan funding). The specific mechanisms for funding the unfunded portion of any of the local City or regional improvements would be articulated as part of SCRIP Part 2. The adoption of Part 2 of the SCRIP will therefore be contingent upon the cities and agencies, as applicable, agreeing to participate in the SCRIP and reaching agreement with them on any required supplemental inter-jurisdictional implementing procedures. Discussions with the cities and agencies regarding their potential participation in SCRIP are already underway and the County's goal is to be in a position for the Board of Supervisors, and the cities and agencies, to adopt Part 2 of the SCRIP within twelve (12) months following the adoption of SCRIP Part 1 and approval of the Ranch Plan GPA/ZC.

II. BACKGROUND/LEGAL AUTHORITY

California Constitution Article 11, Section 7 and Government Code Sections 50029 and 66484.3 permit the establishment of local ordinances to require payment of fees as a condition of approval of a final map or as a condition of issuing a building permit for purposes of defraying the actual or estimated costs of constructing bridges over waterways, railways, freeways and canyons, or constructing major thoroughfares.

Pursuant to the above provisions of the Government Code, the Board of Supervisors adopted Section 7-9-316 of the Orange County Codified Ordinances providing for the establishment of major thoroughfare and bridge construction fees to be paid by subdividers and building permit applicants in the County of Orange.

The SCRIP is being enacted pursuant to the above-described legal authority.

III. AREA OF BENEFIT

The area of benefit ("Area of Benefit") includes portions of the Cities of San Juan Capistrano, Mission Viejo, San Clemente and Laguna Niguel, plus certain developed and undeveloped unincorporated areas in south Orange County (see Figure 1 attached). Within this Area of Benefit, transportation improvements have been identified for all locations at which significant cumulative impacts were identified in the Ranch Plan EIR. The improvements and their locations are described in Table 1 (attached).

It is expected that, ultimately, the SCRIP Area of Benefit may be divided into zones, with one zone for each participating jurisdiction. Each zone will be expected to support the funding/implementation of local improvements within the zone, and to participate in the funding of regional improvements within the zone, pursuant to the SCRIP. It is anticipated that all affected jurisdictions within the Area of Benefit will adopt and participate in the program. With the adoption of Part 1, a zone for the County jurisdiction will be established. Other zones will be created with the adoption of Part 2.

IV. GOALS AND OBJECTIVES OF THE SCRIP

The following are the goals and objectives of the SCRIP:

- To secure full funding for circulation improvements identified in the SCRIP.
- To establish an improvement phasing plan that is consistent with the Ranch Plan development milestones.
- To implement transportation improvements in a timely manner with the goal of maintaining service goals/policies of the affected jurisdictions at the identified locations.
- To establish an equitable cost for equivalent units of development that is applied to development in the Area of Benefit.
- To establish a development and traffic monitoring program to allow the Ranch Plan EIR traffic assumptions to be tracked.
- To establish funding partnerships between affected jurisdictions and regional planning and funding agencies (OCTA, Caltrans, etc.) in order to finance and implement regional traffic improvements within the Area of Benefit.

In summary, the overall goal of the SCRIP is to implement identified transportation improvements in a coordinated and timely manner, anticipating and monitoring growth (through development monitoring procedures) so that the improvements are in place to serve the Ranch Plan and other development as it occurs. The SCRIP will thereby mitigate the future traffic impacts of the Ranch Plan and of other growth in the Area of Benefit.

V. PROCEDURES AND PROTOCOLS

The SCRIP includes a number of procedural and administrative actions and protocols that define the manner in which development will be monitored, and how associated transportation improvements will be identified and implemented. These can be summarized as follows: [Note: All of the following procedures and protocols are established as part of SCRIP Part 1 and are of general application for the entire SCRIP program (both Part 1 and Part 2), except as otherwise noted.]

1. **List of SCRIP Improvements.** The overall transportation improvement program will primarily consist of (a) the improvements comprising the cumulative mitigation measures set out in the Ranch Plan EIR (and formalized in the conditions of development approval for the Ranch Plan), (b) the public benefits set forth in Exhibit D to the Ranch Plan Development Agreement, and/or (c) those supplemental improvements proposed by the participants pursuant to the SCRIP. The list will include:

- Roadway Segments
- Intersections
- State Highway Facilities

The SCRIP Improvements are listed and described in Table 1. Their locations are shown in Figure 2. It should be understood that, in fully defining and implementing the SCRIP, the listed improvements may be refined/modified; for example, in response to jurisdictional requests, in accordance with the provisions regarding consideration of alternative improvements (see No. 9 below).

Also, upon request by a city, the County could consider declaring any local improvement in that city a "County facility." In that event, the County would have responsibility for the implementation of that improvement. The declaration of an improvement as a County facility would be contingent on (1) the County reaching a mutually agreeable arrangement with the city and (2) approval of the agreement by the Board of Supervisors and the applicable city council.

[Note: For any improvements that have not yet been included in CEQA documentation, the formal inclusion of said improvements in the SCRIP will be contingent on completing any required supplemental CEQA review and/or documentation. Furthermore, it is understood that additional environmental review and/or documentation may be required when the final design of improvements is completed.]

2. **Cost of Improvements.** Cost estimates will be prepared for the listed improvements, and will include all costs associated with implementing each improvement (including planning, environmental clearance, design, right-of-way acquisition and construction) plus 5 percent administration costs and a 10 percent cost contingency. Indexing will be applied to both the costs and the associated fees for funding the improvements, in accordance with No. 14 below.
3. **Cost Share Methodology.** The SCRIP will identify the cost shares for each of the circulation improvements in the SCRIP based on traffic share/use of said improvement. For local City and regional improvements, the shares will be refined based on agreements with the affected jurisdictions and/or agencies in consideration of established impact fees within their respective jurisdictions, transportation improvement programs in the affected jurisdictions, conditions of approval and/or development agreements for development projects in the affected jurisdictions, and other pertinent factors. For SCRIP Improvements that have been funded by other means (e.g., the regional STIP), the agreements reached with jurisdictions/agencies in conjunction with SCRIP Part 2 will consider to what extent the fair share fees for those improvements may be rolled over to other projects.
4. **Unit Cost Methodology/SCRIP Fees.** For SCRIP Part 1, the various land uses in the County zone of the Area of Benefit (single family dwelling, multi family dwelling, senior dwelling and non-residential uses) that are approved as part of the Ranch Plan GPA/ZC, are proposed to be reduced to equivalent dwelling units ("EDUs") and assigned relative values based on their traffic generation (see Table 2 for proposed EDU factors for each type of land use). The monies that have been committed to be paid by the Ranch Plan developers towards the SCRIP improvements have been divided by the total of EDUs within the County zone to determine the SCRIP fees ("SCRIP Fees") for each Ranch Plan EDU or fraction thereof (see Table 3).

The methodology for determining unit costs and SCRIP fees for other zones will be established as part of SCRIP Part 2, taking into account any established impact fees within the affected jurisdictions, conditions of approval and/or development agreements for development projects in the affected jurisdictions, and other pertinent factors. The methodology may or may not utilize the EDU concept.

In any event, in determining the cost of SCRIP improvements that are the responsibility of the participants within each zone, only the remaining net costs of the improvements (i.e., the shortfall after deducting any contributions made towards these improvements by the Ranch Plan developers) would be included.

5. **Fee Application.** SCRIP Fees are to be levied on “new development” only and are to be collected prior to issuance of any building permit for such development. (See definition of “new development” in definitions section below.) Existing development and tax exempt properties/users (see No. 12 below) will not be required to pay SCRIP Fees. SCRIP Fees will be applied consistent with the fee for the Area of Benefit zone in which the improvement is located.
6. **Sources of Funds.** SCRIP Fees paid at issuance of building permits will be the principal source of funds for the SCRIP Program. However, the Ranch Plan developers will be required to make an initial deposit of funds (amount and exact timing to be determined) to the SCRIP prior to the issuance of any building permit to facilitate implementation of SCRIP improvements if needed to comply with SCRIP goals and objectives. Other sources of funding may include local, state and federal funds. It is also anticipated that the road improvements could be partially funded through bond financing or other public financing which encumbers certain of the Ranch Plan properties.
7. **Development and Traffic Monitoring Program.** The County will utilize an Annual Monitoring Report (“AMR”) program to monitor development of the Ranch Plan (and other development subject to the SCRIP) and related traffic. (The “AMR” is defined in the definitions section below.)
8. **Improvement Phasing Plan.** An improvement phasing plan has been prepared to identify needed transportation improvements for anticipated Ranch Plan development (see Table 4). This improvement phasing plan has been prepared to be consistent with the Ranch Plan development milestones set forth in the Ranch Plan Development Agreement. The phasing plan will be updated to respond to information derived from the AMR and from agreements reached in conjunction with SCRIP Part 2, as well as to respond to significant developer-initiated changes in the Ranch Plan project phasing.
9. **Alternative Improvements.** The County may consider the implementation of alternative improvements, either on its own recommendation or upon a request by a jurisdiction/agency. Prior to approving any such alternative improvement, the County will consider whether (a) the jurisdiction/agency cost share, and obligation of SCRIP to fund, the alternative improvement is consistent with the cost share and funding obligation for the original improvement, and (b) whether the alternative improvement will provide an equivalent level of mitigation. If approved, the rationale for funding/implementing the alternative improvement will be memorialized in a written document.
10. **Documentation.** The SCRIP administrator (See No. 15 below) will prepare an annual written report, available to all participants. The documentation will report on development

milestones achieved, describe the phasing steps yet to be accomplished and will provide the supporting technical material for updates to the phasing program. The information/documentation will guide administrative actions, such as the issuance of building permits, and the timing of the steps involved in implementing improvements (planning, environmental clearance, design, right-of-way acquisition and construction).

11. **Development Agreements.** The County and Cities have adopted road fee programs and have entered into a number of development agreements that require developers to provide road improvements and participate in fee programs. The SCRIP does not supersede these programs or agreements; rather, it is intended to complement them. The applicability of, and means of application of, SCRIP to any development within areas covered by an approved development agreement (including the Ranch Plan Development Agreement) will be governed by the terms of that development agreement. In the event of any conflict between these provisions and the terms of the development agreement, the development agreement will prevail.
12. **SCRIP Fee Exemption.** All tax exempt properties/uses shall be exempt from the payment of SCRIP Fees. The final determination of whether a property is exempt will be based upon verification of a property tax exemption for those specified categories on the latest Assessor's roll as defined for Orange County by the State of California.

The construction of government-owned facilities or utilities shall be exempt from payment of SCRIP Fees to the extent that the facilities will not be used for generating revenue or commercial purposes. Examples of exempt public uses are city halls, park buildings, and other similar public building uses. The construction of privately owned utilities will not be exempt from payment of SCRIP Fees.

13. **SCRIP Fee Credit.** Development project proponents will be eligible to receive credit for (a) monies paid to SCRIP as a deposit in advance of the issuance of building permits (see No. 6 above), and (b) SCRIP improvements which they are required to construct pursuant to the provisions of development agreements, subdivision approvals or other discretionary permits/approvals. These credits ("SCRIP Fee Credits") may be used in lieu of the payment of SCRIP Fees in order to obtain building permits. SCRIP Fee Credits earned by a project proponent may be transferred to another landowner together with the transfer of land title. Otherwise, transfer of SCRIP Fee Credits will not be permitted.

The amount of any SCRIP Fee Credit will be fixed in a fee credit agreement and will be a credit towards the fee applicable at the time building permit(s) are issued for the subject EDU(s). With regard to credits for SCRIP improvements, no such credits will be granted unless the subject improvement is consistent with an approved SCRIP improvement. Furthermore, the amount of SCRIP Fee Credits available for SCRIP improvements will be based upon the costs included in the fee program or the actual costs of the improvement, whichever is less. Credit for the value of land dedicated by a developer for a SCRIP Improvement may be allowed to the extent the dedication is beyond the normal exaction associated with a subdivision approval.

SCRIP Fee Credits will also be given in the amount of any bond proceeds which have been received by the County (and allocated by the County) for the facilities covered by this SCRIP.

- 14. Adjustment of Improvement Costs and SCRIP Fees.** The estimated costs of improvements and the SCRIP Fees will be automatically adjusted, periodically, based on the California Construction Cost Index (CCI Index) prepared and published by the State Department of Transportation. To the extent that such adjustments place a disproportionate burden on landowners or developers who are not limited by a maximum fee in a development agreement or vesting subdivision map, such adjustments may be appealed to the SCRIP administrator under the process outlined in No. 16 below.

Updated project cost estimates, substantial changes in General Plan elements, or other pertinent information which may also be cause for program and fee modification/adjustment will be presented to the Board of Supervisors for further action.

- 15. Implementation Procedures.** The SCRIP will be administered by the Manager of Transportation Services, or other person designated by the Director RDMD. Following the adoption of SCRIP Part 2, the SCRIP administrator will consult with the SCRIP Advisory Team in implementing the SCRIP.
- 16. Fee reconciliation, appeal process.** A fee reconciliation and appeal process is established as part of SCRIP. As part of that process, all disputes regarding the applicability of SCRIP Fees and/or SCRIP Fee Credits to specific projects, or the exemption of projects from SCRIP Fee requirements, will be presented to the Director of the Resource Development Management Department ("RDMD"), or his designee, for resolution. Following the adoption of SCRIP Part 2, the Director RDMD, or his designee, would consult with the SCRIP Advisory Team prior to rendering a decision on an appeal.
- 17. SCRIP Advisory Team.** Following the adoption of Part 1 of the SCRIP, an Advisory Team consisting of one member each from the County of Orange, and each participating city and agency will be established to advise the County in SCRIP development, implementation and administration. The duties and responsibilities of the Advisory Team with regard to program monitoring, reporting, program costs and fees, etc., will be defined in Part 2 of SCRIP.

DEFINITIONS AND SPECIFICATIONS

The following are the key technical definitions and administrative specifications in the SCRIP.

Level of Service Goals. The level of service goals (i.e., “performance criteria”) for local County and City facilities included in the SCRIP are those used by the respective jurisdictions in the study area. For regional/CMP facilities, the level of service goals are those prescribed in the CMP.

Annual Monitoring Report (AMR). The AMR program is the program outlined in General Provision 11 of the Ranch Plan Planned Community Program Text and in Section 7.9-103.2(a)(11) of the County Zoning Code.

New Development. Residential units that are to be newly constructed for the first time and that require a building permit will be assessed a flat fee for each such unit (regardless of size) on a one-time basis, according to their respective EDU factors. Non-residential construction that requires a building permit will be assessed a fee based on its gross square footage, in accordance with its EDU factor. Supplemental construction that increases the square footage of non-residential structures will be assessed an additional fee if required according to the applicable EDU factor.

Table 1 – List and Description of SCRIP Improvements

| IMPROVEMENT LOCATION/JURISDICTIONS | DESCRIPTION OF IMPROVEMENTS |
|--|---|
| Mission Viejo | |
| I-5 – Saddleback Connector | Per Caltrans design plans/PSR |
| CVP/I-5 Bridge widening | Per Caltrans design plans/PSR |
| Oso/I-5 – Southbound Ramp | Per Caltrans design plans/PSR |
| Oso Pkwy Widening (I-5/Marguerite) | Add 4th lane in each direction |
| Oso/Felipe Intersection | Felipe Road: Southbound – add 2nd left turn lane |
| CVP/Marguerite Parkway Intersection | CVP-Westbound – Add 2nd left lane, 4th thru-lane & 1 right turn lane |
| San Juan Capistrano | |
| I-5/Ortega Interchange | Per Caltrans/City design plans/PSR |
| Ortega – Context sensitive design in City | Per Caltrans/City design plans/PSR |
| Rancho Viejo/Ortega Hwy. Intersection | Rancho Viejo Rd.-Northbound – add 2nd left turn lane |
| La Novia/Ortega Hwy. Intersection | Ortega – Add 2nd EB Left turn lane |
| Valle Rd/SJC Road Intersection | Per City nexus program |
| I-5/Junipero Sierra Road | Per Caltrans/City design plans/PSR |
| Camino Capistrano/Del Obipso | Per City nexus program |
| San Clemente | |
| I-5/SB Ramp @ Pico | Per Caltrans design plans PSR-SB off ramp restripe and Signal modification |
| Camino Vera Cruz/V. Hermosa Intersection | Vera Cruz – Add 2nd SB left lane |
| La Pata/V. Hermosa Intersection | La Pata – Add SB free right turn lane, Vista Hermosa/EB – Add 2nd & 3rd left turn lane |
| Laguna Niguel | |
| CVP/Railroad Bridge Improvement. | Per City Design |
| CVP/Forbes | Per City 'Gateway' Project conditions |
| CVP @ Cabot Road | Per City 'Gateway' Project conditions |
| CVP/I-5 Bridge widening | Per Caltrans design plans PSR |
| Avery/I-5 Interchange | Per Caltrans/City design plans/PSR |
| County Of Orange | |
| Oso Parkway Widening Meandering Trail to Solano | Add one lane (3rd lane) in each direction |
| La Pata construction & widening Ortega/Vista Hermosa | Add one lane from Ortega Hwy. to Landfill and 4 lanes from landfill to Calle Saluda |
| Antonio Parkway Widening – Ladera to Ortega Highway | Add one lane (3rd lane)in each direction and widen bridge |
| Antonio/Oso Intersection | Antonio – Add 4th SB through lane, add 3rd NB left land, Oso add 4th WB through lane |
| Antonio/La Pata/Ortega Intersection | Antonio – Add 2nd through lane & free right lane, La Pata Add 2nd NB left turn & 2nd through lane, Ortega – Add 2nd EB through lane |
| Antonio/CVP Intersection | CVP – Add 2nd EB right lane, Antonio-Add 3rd NB left lane |

Table 2 – EDU Factors and SCRIP Fees for Ranch Plan

| Proposed Land Use | EDU Factor ^{1/} | Fee Per Unit ^{2/} |
|-------------------------------|---------------------------------|-----------------------------------|
| Single-Family Detached | 1.00 | \$ 14,225.99 |
| Single-Family Attached | 0.80 | \$ 11,380.79 |
| Multi-Family Attached | 0.70 | \$ 9,958.20 |
| Age-Restricted Detached | 0.40 | \$ 5,690.40 |
| Age-Restricted Attached | 0.30 | \$ 4,267.80 |
| Non-Residential ^{3/} | 0.50 | \$ 7,113.00 |

^{1/} To calculate the fees, the “equivalent dwelling unit” factor was used. An “equivalent dwelling unit” (EDU) is a unit of measure which expresses single-family, multi-family and non-residential development on a common trip generation basis.

^{2/} Fees are based on estimated contributions towards road improvement costs in the total amount of \$143,775,000 (see Table 3 for details regarding fee calculation). The fee for each unit of a proposed land use is the EDU Factor for that land use multiplied by the fee for a single-family detached unit.

^{3/} Each unit of non-residential is equal to 1,000 square feet of gross floor area.

Table 3 – Calculation of SCRIP Fee

| Proposed Land Use | Total # of Units | EDU Factor Per Unit | Total EDU's | .85 EDU'S ^{2/} | Adj # of Units ^{3/} | Fee Per Unit | Amount ^{4/} |
|---|----------------------|---------------------|--------------|-------------------------|------------------------------|--------------|----------------------|
| Single-Family Detached | 4400 | 1.00 | 4400 | 3740 | 3740 | \$14,225.99 | \$53,205,214 |
| Single-Family Attached | 2400 | 0.80 | 1920 | 1632 | 2040 | \$11,380.79 | \$23,216,821 |
| Multi-Family Attached | 1200 | 0.70 | 840 | 714 | 1020 | \$9,958.20 | \$10,157,359 |
| Age-Restricted Detached | 4300 | 0.40 | 1720 | 1462 | 3655 | \$5,690.40 | \$20,798,402 |
| Age-Restricted Attached | 1700 | 0.30 | 510 | 434 | 1445 | \$4,267.80 | \$6,166,968 |
| Non Residential ^{1/} | 5000 | 0.50 | 2500 | 2125 | 4250 | \$7,113.00 | \$30,230,236 |
| | 19000 | | 11890 | | 10107 | 16150 | \$143,775,000 |
| Estimated Total Contributions towards Road Improvement Costs: | \$143,775,000 | | | | | | |
| SCRIP Fee Per EDU ^{5/} | \$14,225.99 | | | | | | |

Notes:

^{1/} Each unit of non-residential is equal to 1,000 square feet of gross floor area.

^{2/} The above calculation of the SCRIP Fee is based on the obligation that requires the Ranch Plan contribution of \$143,775,000 to be fully paid by the time building permits for 85 percent of the Ranch Plan EDU's have been issued.

^{3/} For each land use, the adjusted # of units is equal to the total number of units multiplied by .85.

^{4/} Adjusted number of units multiplied by fee per unit of land use.

^{5/} Estimated total contribution of \$143,775,000 divided by a number equal to 85 percent of the Total EDUs.

Table 4 – Improvement Phasing Plan

| Development Milestone | Circulation Improvements | Cost of Improvements inc. Contingency (000's) | Engineering, Admin and Indirects (000's) | Project Fair Share (%) | Project Fair Share (000's) | Total Project Share (000's) | Other (Non-Project) Funding Req's (000's) | Jurisdictions |
|--|--|---|--|------------------------|----------------------------|-----------------------------|---|------------------------|
| 0 EDU - 1 EDU (Except for Model Homes) | Offer of Dedication of La Pata ROW including Slopes (Width to be determined per Project Report) | (TBD) | (TBD) | 100% | | | | County |
| | Allocate Funds for Local Improvements in the City of Mission Viejo | \$17,624 See Note 1 | (INC) | | | \$2,000 | \$4,350 See Note 2 | City of Mission Viejo |
| | Fund Preliminary Designs, Env. Studies for Select Projects (25% of Admin/Contingency Amount) | \$12,200 | 0% | 0 | \$5,320 | \$6,880 | | All |
| | Oso Parkway Widening in Unincorporated County (e/o Las Flores) | \$2,500 | (INC) | 50% | \$1,250 | \$1,250 | | County |
| 1 EDU - 1000 EDU | Pico/I-5 Interchange Improvements (See Note 3) | \$4,082 | See Note 4 | 14% | \$571 | \$571 | \$3,511 | Caltrans/San Clemente |
| 0.1-14 | Reallocate Funds previously identified for I-5 SB Ramps @ Oso Parkway to Local Improvements in Mission Viejo | | See Note 5 | 31% | \$4,126 | \$3,068 | See Note 5 | City of Mission Viejo |
| | Widen Ortega Highway - Antonio Parkway to west of San Juan Creek (including bridge) | \$15,000 | See Note 4 | 40% | \$6,000 | \$6,000 | | Caltrans/County |

Contribution in Excess of Fair Share**NOTES:**

- 1 The cost of improvements shown here is an aggregate cost for all City of Mission Viejo Local Improvements as set forth in the Mission Viejo Settlement Agreement (Exhibit A – Table 1)
- 2 The amount shown here is an aggregate of currently available funds for Mission Viejo Local Improvements as set forth in the Mission Viejo Settlement Agreement (Exhibit A – Table 1)
- 3 This project is fully funded by OCTA/Caltrans. Project's Fair Share assumed to be available for reallocation to other State Highway projects
- 4 Caltrans Support Costs/Overhead (inc. design) is not included and is assumed to be the total responsibility of Caltrans as administrator of State Highway system
- 5 The I-5 SB Ramps at Oso Parkway improvements are fully funded by OCTA/Caltrans. The Total Project Share shown is allocated to Mission Viejo Local Improvements per the Mission Viejo Settlement Agreement.
- 6 The costs of improvements are included in the aggregate cost for all Mission Viejo Local Improvements. See Note 1.
- 7 Non-project funding requirements for Mission Viejo Local Improvements are shown as an aggregate amount. See Note 2.
- 8 Funding for the Park and Ride Facility will be provided at the 5001 EDU - 7500 EDU milestone.
- 9 Total Project Share is less than Project Fair Share due to reallocation of funding obligations pursuant to the Mission Viejo Settlement Agreement.
- 10 Funds for Oso Parkway Widening were included as part of another reallocation under an earlier milestone. Thus, no Total Project Share is shown here.
